1. General

1.1 Features

Duct Type Air Conditioner

Features

➤ Save Installation Space

The indoor unit can be installed inside the ceiling conveniently.

➤ Optional Static Pressure

Optional ESP, a variety of optional installation methods.

➤ High Efficiency and Environment Friendly New Refrigerant-R410A

R410A can protect the environment and do not harm to the ozone layer.

➤ 24-hour Timer ON and OFF

This Timer can be set to automatically turn the unit on or off within a 24-hour period.

➤ Mute Operation

The excellent fan design enable the airflow to be quiet and smooth with minimum noise.

➤ Meeting Various Installation Requirements

The back-air-inlet type is usually to be adopted according to the actual installation space. The unit is also installed with down-air-inlet type and the noise will increase about 5-6dB.

➤ Auto re-start from Power Break

When the power supply is recovered after power break, all preset are still effective and the air-conditioner will run according to the previous setting.

➤ Fault Self-diagnose Function

When there is something wrong with the air-conditioner ,the micro computer could diagnose the faults, which can be read from the display and is convenient for maintenance.

1. GENERAL

Cassette Type Air Conditioner

Features

➤ Save Installation Space

The indoor unit can be installed inside the ceiling conveniently.

➤ High Efficiency and Environment Friendly New Refrigerant-R410A

R410A can protect the environment and do not harm to the ozone layer.

➤ 24-hour Timer ON and OFF

This Timer can be set to automatically turn the unit on or off within a 24-hour period.

➤ Mute Operation

The excellent fan design enable the airflow to be quiet and smooth with minimum noise.

➤ Auto re-start from Power Break

When the power supply is recovered after power break, all preset are still effective and the air-conditioner will run according to the previous setting.

➤ Fault Self-diagnose Function

When there is something wrong with the air-conditioner, the micro computer could diagnose the faults, which can be read from the display and is convenient for maintenance.

1. GENERAL

Ceiling &Floor Air Conditioner

Features

➤ Save Installation Space

The indoor unit's thickness is only 230mm,can be installed inside the ceiling conveniently.

➤ Flexible Installation Options

According to the actual installation space,The indoor unit can be installed in the ceiling or on the floor. One unit, Two installation method.

➤ High Efficiency and Environment Friendly

New Refrigerant-R410A

R410A can protect the environment and do not harm to the ozone layer.

➤ 24-hour Timer ON and OFF

This Timer can be set to automatically turn the unit on or off within a 24-hour period.

➤ Mute Operation

The excellent fan design enable the airflow to be quiet and smooth with minimum noise.

➤ Various Refrigerant Pipe Connect Methods

The refrigerant pipe can be connect from 3 different directions(rear,right or top) .More methods, more conveniently.

➤ Auto re-start from Power Break

When the power supply is recovered after power break, all preset are still effective and the air-conditioner will run according to the previous setting.

➤ Fault Self-diagnose Function

When there is something wrong with the air-conditioner, the micro computer could diagnose the faults, which can be read from the display and is convenient for maintenance.

1. GENERAL

1.3 Model identification

G B Z -18 H-S 1

serial number

S:Refrigerant R410A

H:Heat Pump Type

Cool Capacity: 18×10^3 Btu/h

Z- inverter

Type:B-Cassette Type, D-Duct Type, F-Ceiling &Floor Type
Galactic Air Conditioner

1.4 Unit construction

1:1 system is the only combination compatible.

(1 indoor unit only can be connected with 1 outdoor unit.)

1. GENERAL

1.5 Working range

Power Supply

Working Voltage	176V ~ 264V
Voltage Imbalance	Within a 3% deviation from each voltage at the main terminal of outdoor unit
Starting Voltage	Higher than 85% of the Rated Voltage

Operating temperature range

This heat pump air conditioner has been designed for the following outdoor operating temperatures.

Type	Mode	Outdoor operating temperature range(°C)	
		maximum	minimum
DC-Inverter Split Air Conditioner (Heat pump type)	Cooling Operation	48	-15
	Heating Operation	24	-15

Storage condition:

Temperature -20~65°C

Humidity 30%~80%

Description

- 1 Run indicator (Red)**
It lights on during operation. It lights off during SLEEP mode.
- 2 Emergency switch**
The filter clean indicator will be off when the switch is pressed. The unit will stop operation if pressing the button. When the unit is off, it will start auto operation if pressing the button, if pressing for more than 5s, the unit will operate in cooling mode.
- 3 Timer indicator (Green)**
It lights on when timer is in use. It lights off when timer finishes.
- 4 Filter clean (Yellow)**
It lights on when the filter should be cleaned.
- 5 Defrost indicator (Green)**
It lights on during defrosting. It lights off when defrosting is finished.
- 6 Buzzer**
It beeps when the signal from remote controller is received.
- 7 Infrared receiver**
Receives signal from the remote controller.

-  • *The figures in this manual are based on the external view of a standard model. Consequently, the shape may differ from that of the air conditioner you have selected.*
* *It can be set or canceled by professional after-sale staff*

NOTE:

1. Test conditions:

Cooling : Indoor: DB27°C/ WB19°C Outdoor: DB35°C/ WB24°C

Heating: Indoor: DB20°C/ WB15°C Outdoor: DB7°C/ WB 6°C

2. The Sound Pressure Level is based on the following conditions:

Outdoor unit:

Test the noise value of 4 points, the points are 1 meter in front of the four sides of the unit surface and height = 1/2(unit height

+1) meter from floor level, and calculate the weighted average of the noise.

Indoor unit:

Duct: Test the noise value of the point 1.4m below the unit.

The above data was measured in an anechoic chamber. Please take into consideration reflected sound of your specific site.

3. The values given in the table for noise level reflect the levels in anechoic chamber.

1. Test conditions:

Cooling : Indoor: DB27°C/ WB19°C Outdoor: DB35°C/ WB24°C

Heating: Indoor: DB20°C/ WB15°C Outdoor: DB7°C/ WB 6°C

2. The Sound Pressure Level is based on the following conditions:

Outdoor unit:

Test the noise value of 4 points, the points are 1 meter in front of the four sides of the unit surface and height = 1/2(unit height +1) meter from floor level, and calculate the weighted average of the noise.

Indoor unit:

Cassette: Measure the noise value of the point 1.4m below the unit.

The above data was measured in an anechoic chamber. Please take into consideration reflected sound of your specific site.

3. The values given in the table for noise level reflect the levels in anechoic chamber.

4. ELECTRICAL DATA

4. Electrical data

Outdoor unit	Power supply			Applicable voltage		ELB	
	Voltage(V)	PH	Frequency	Umin(V)	Umax(V)	Nominal Current(A)	Nominal Sensitive Current(mA)
18K	220-240	1	50	176	264	20	30
24K	220-240	1	50	176	264	32	30
36K	220-240	1	50	176	264	40	30

NOTE:

1. The above compressor data is based on 100% capacity combination of indoor units at the rated operating frequency
2. This data is based on the same conditions as the nominal heating and cooling capacities.
3. The compressor started by an inverter, resulting in extremely low starting current.

5. CAPACITIES AND SELECTION DATA

5. Capacities and selection data

5.1 Capacity Characteristic charts

The following charts show the characteristics of outdoor unit capacity, which corresponds with the operating ambient temperature of outdoor unit.

Conditions:

- ① Pipe length / height difference : 5m / 0m
- ② Compressor at rated inverter frequency
- ③ Indoor fan speed at high fan speed
- ④ Capacity loss due to white frost and defrost operation is not included.

5.2 Piping length correction factor

The correction factor is based on the equivalent piping length in meters (EL) and the height between outdoor and indoor units in meters (H).

H:

Height between indoor unit and outdoor unit (m).

- $H>0$: Position of outdoor unit is higher than position of indoor unit (m).

- $H<0$: Position of outdoor unit is lower than position of indoor unit (m).

L:

Actual one-way piping length between indoor unit and outdoor unit (m).

EL:

Equivalent one-way piping length between indoor unit and outdoor unit (m).

5. CAPACITIES AND SELECTION DATA

Gas Diameter (mm/inch)	9.52 (3/8')	12.7 (1/2')	15.88 (5/8')	19.05 (3/4')
90° Elbow	0.15	0.2	0.25	0.35

Cooling

EL	5m	10m	15m	20m	25m	30m
18K	1.0	0.99	0.99	0.99	0.99	0.99
24K	1.0	0.99	0.98	0.96	0.94	0.92
36K	1.0	0.95	0.93	0.90	0.88	0.85

Heating

EL	5m	10m	15m	20m	25m	30m
18K	1.0	0.98	0.96	0.94	0.91	0.88
24K	1.0	0.99	0.97	0.95	0.93	0.91
36K	1.0	0.94	0.91	0.88	0.85	0.82

The correction factor of height between indoor unit and outdoor unit

Height difference	5m	10m
Factor	0.01	0.02

In order to ensure correct unit selection, consider the farthest indoor unit.

NOTE

1. The datas test above are based on the height between indoor unit and outdoor unit is 0.
2. Be sure to reduce the length of connection pipes, otherwise, performance decline will be great. In case of install outdoor unit higher than indoor unit in cooling mode, or install outdoor unit lower than indoor unit in heating mode, it is necessary to minus hight correction factor from length correction factor when calculate cooling/heating performance .

5. CAPACITIES AND SELECTION DATA

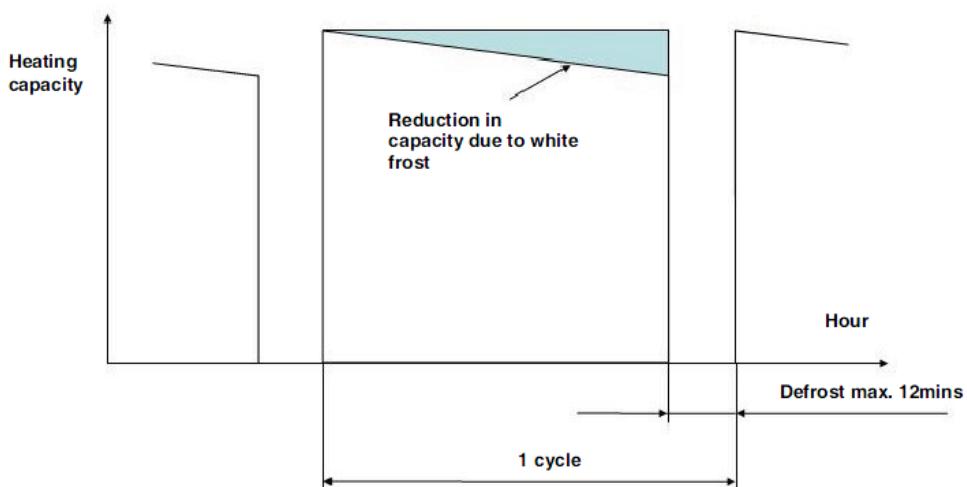

5.3 Correction factors according to defrosting operation

The heating capacity in the preceding paragraph, excludes the condition of the frost or the defrosting operation period. In consideration of the frost or the defrosting operation, the heating capacity is corrected by the equation below.

Corrected heating capacity = Defrost Correction factor x unit capacity

OUTDOOR TEMPERATURE (°CDB)	-15	-10	-5	0	7	10	15
Correction factor (humidity rate 85% RH)	0.95	0.95	0.91	0.81	1.0	1.0	1.0

Correction Factor

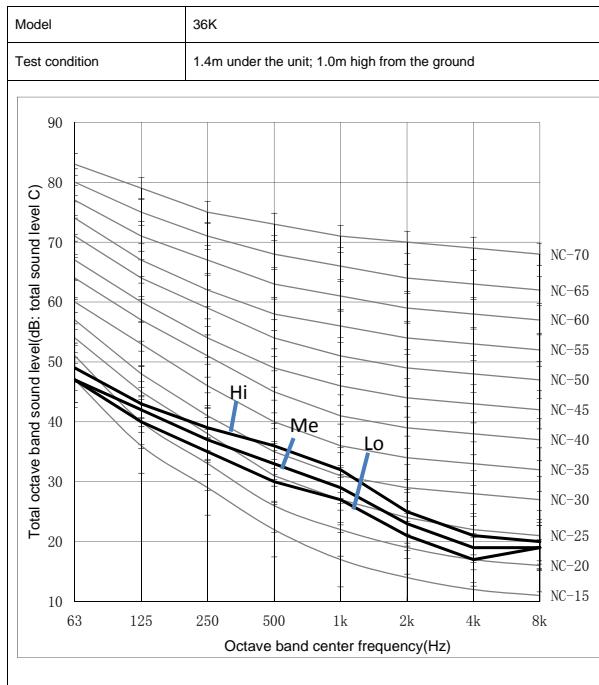

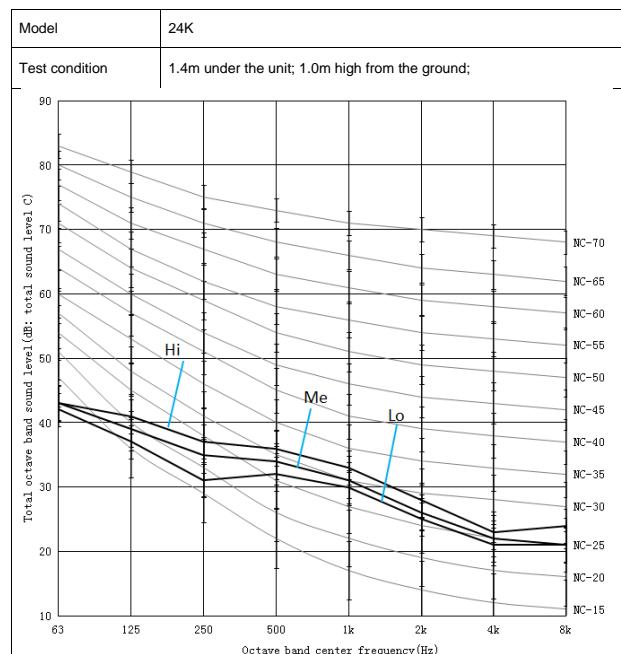

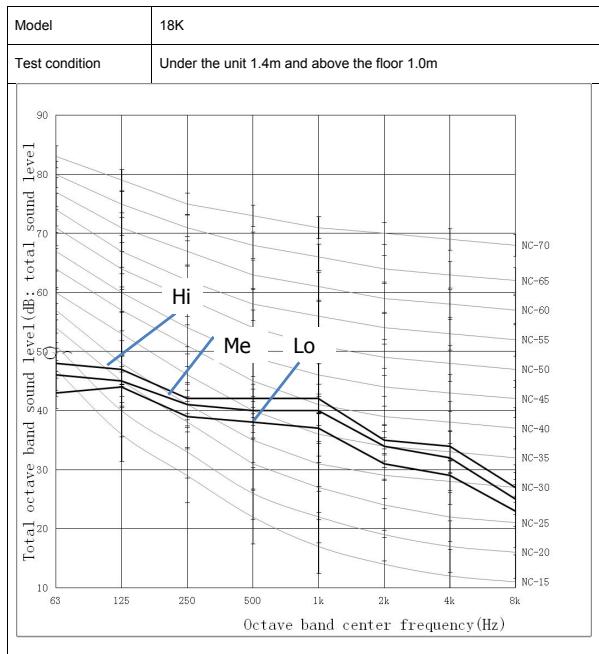

NOTE:

The correction factor is not valid for special conditions such as snowfall or operation in a transitional period.

10. Fresh air intake function

Cassette (24K/36K)

It is possible to inhale fresh air to indoor unit from the reserved fresh air intake, the size of the fresh air intake is 75×53 (mm) .

Please follow the steps below when need.

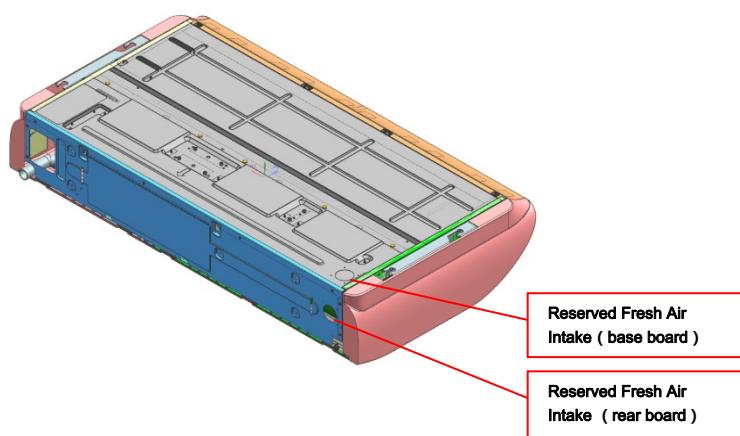

- 1) Cut off the reserved metal rectangular hole on the base board .
- 2) Cut off the foam material on the a rectangular hole , and the final hole size is 75×53 (mm) .
- 3) Connect air duct with the fresh air intake.

Ceiling&Floor

All of the floor & ceiling indoor units are provided with fresh air function. It is possible to inhale fresh air to indoor unit from the reserved fresh air intake, the size of the fresh air intake is $\Phi 50$ (mm) . Please follow the steps below when need.

- 1) Cut off the reserved metal rectangular hole on the base board or rear board according to installation location .
- 2) Connect air duct with the fresh air intake.

11.3 Field Setting

DIP Setting

Dip Switch Setting of Outdoor Unit

Turn off all power sources before setting. Without turning off, the switches settings are not refreshed and might be invalid. Mark of "■" indicates the position of dip switches.

SW2	Refrigerant Piping Length Setting	
Setting is required		
	Actual Piping Length L(m)	
Setting before Shipment	L<15 ON OFF 1 2 3 4	15≤L≤Max.Length allowed ON OFF 1 2 3 4

After set refrigerant piping length dip switch , cooling/heating performance could be improved.

11. WIRING DIAGRAM

Static Pressure Setting

Change of Static Pressure

The static pressure outside the indoor unit can be chosen .

For AC MOTOR type:

You can change the static pressure by changing the fan motor terminal which refer to following figure.

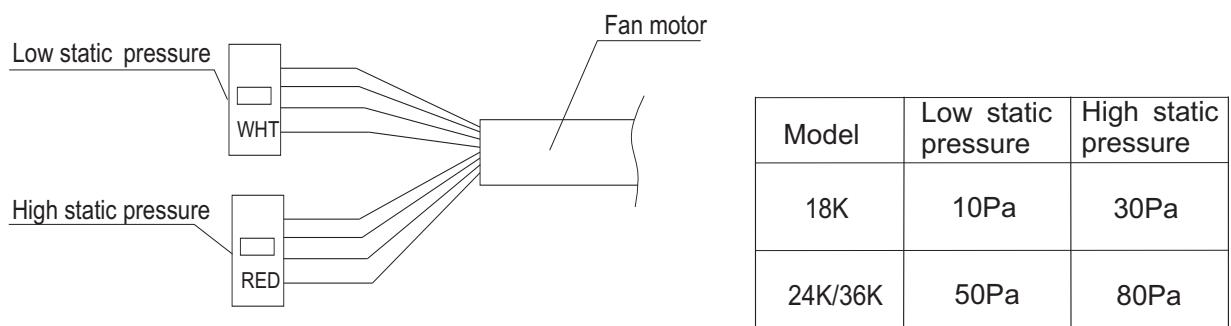

Fig 6.2.1

Note: Default Settings is low static pressure by factory.

The noise under high static pressure is higher than static pressure .

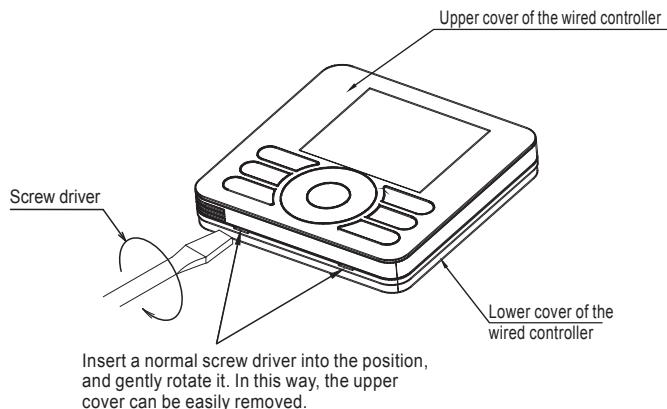

11. WIRING DIAGRAM

Indoor unit parameter revise

Internal control parameter adjustment can be performed using wire remote controller YXE-C01U/YXE-C02U.

1. Connect wire remote controller with indoor unit

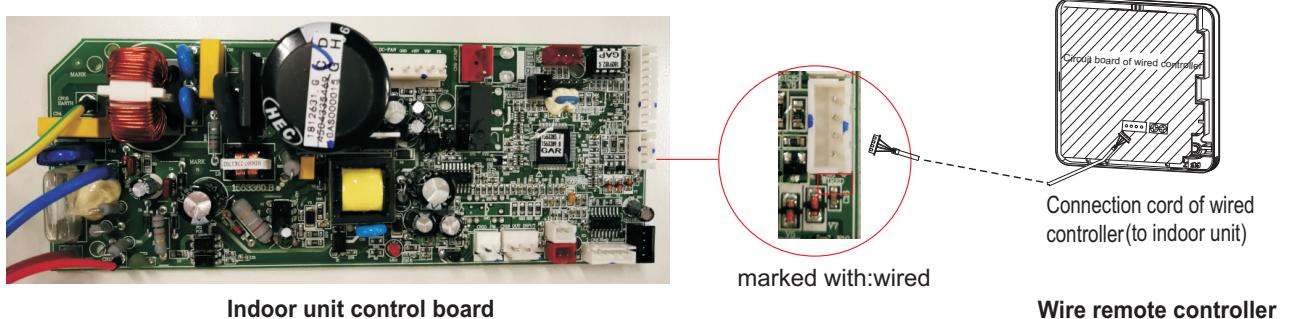

Step 1: Removing the upper cover of the wired controller

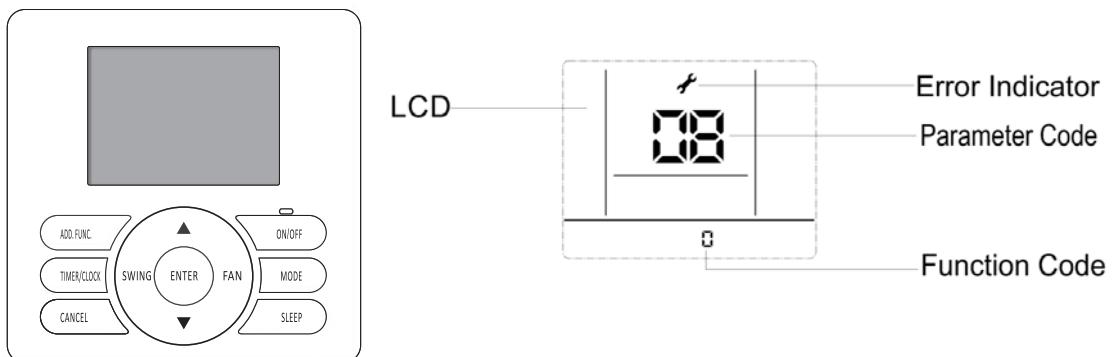

Note:

Control board of the remote controller is placed on upper cover. Please protect it from being scratched during removal and installation!

Step 2: Connecting wired controller with indoor unit

2. Changing system parameter

OPERATION:

- ① Hold down both "MODE" button and "ADD.FUNC." button for 3 seconds, symbol and parameter number blinking at the same time.
- ② Press ""/ "" button to adjust parameter number until display "17". And press "ENTER" button to entering system parameter adaption state, symbol stop blinking, parameter number blink.
- ③ Select desired parameter code by pressing ""/ ""button following the table below, and press "ENTER" button to confirm.
- ④ Select desired function code by pressing ""/ ""button , and press "ENTER" button to confirm.

11. WIRING DIAGRAM

Press “ON/OFF”button or “CANCEL”button to quit parameter adaption state.
 ⑤Press “ON/OFF”button or “CANCEL”button to quit.

PARAMETER CODE	PARAMETER DESCRIPTION	PARAMETER VALUE&REPRESENTATION		NOTE
		DATA TYPE	REPRESENTATION (FUNCTION CODE)	
1	Self Recovery of Power Break	Integer	0: Cancel Self Recovery of Power Break function; 1: Self Recovery of Power Break; others: invalid	
2	Temperature Type	Integer	0: Centigrade Temperature; 1: Fahrenheit Temperature; others: invalid	
3	Temperature Display Type	Integer	0: Default display set temperature; 1: Default display room temperature; others: invalid	
4	Ratio of ambient temperature sensed by indoor temperature sensor(cooling mode)	Integer	0~10valid, more than 10 default is10 0: 0%; 1: 10%; ...; 10: 100%	0-entirely use temperature sensed by wired remote controller; 10-entirely use temperature sensed by indoor unit
5	Filter Clean Indication	Integer	0: Cancel Filter Clean prompt function; 1: Set Filter Clean prompt function; others: invalid	
6	Filter Clean Time Set	Integer	0~32, more than 32 default is 32*1000h	
7	Installation Height	Integer	0~10m, more than 10m default is 10	
8	Cooling Temperature Compensation (indoor unit temperature sensor)	Integer	0: 0°C; 1: -0.5°C; 2: -1°C; 3: -1.5°C; 4: -2°C; 5: -2.5°C; 6: -3°C; 7: -3.5°C; 8: -4°C; 9: -4.5°C; 10: -5°C; (the wired controller displays integer with the symbol)	
9	Heating Temperature Compensation (indoor unit temperature sensor)	Integer	0: 0°C; 1: -0.5°C; 2: -1°C; 3: -1.5°C; 4: -2°C; 5: -2.5°C; 6: -3°C; 7: -3.5°C; 8: -4°C; 9: -4.5°C; 10: -5°C; (the wired controller displays integer with the symbol)	
10	Static Pressure Set	Integer	1~240, function code=static pressure more than the limit static pressure default the limit static pressure, Default is 0(default static pressure, related to models)	Duct type (DC motor)
12	Ratio of temperature sensed by indoor temperature sensor(Heating mode)	Integer	0~10valid, more than 10 default is10 0: 0%; 1: 10%; ...; 10: 100%	0-entirely use temperature sensed by wired remote controller; 10-entirely use temperature sensed by indoor unit
13	Temperature Adjustment-Cooling	Character	-10~10°C (Single Character with symbol)	Temperature displayed on wired controller
14	Temperature Adjustment-Heating	Character	-10~10°C (Single Character with symbol)	Temperature displayed on wired controller
25	Access control, fire protection function set	Integer	=0, Access control, fire protection functions are all disabled; =1, Access control function is enabled; =2, fire protection function is enabled; =3, Access control, fire protection are all enabled.	

11. WIRING DIAGRAM

11.4 Running Parameter Query

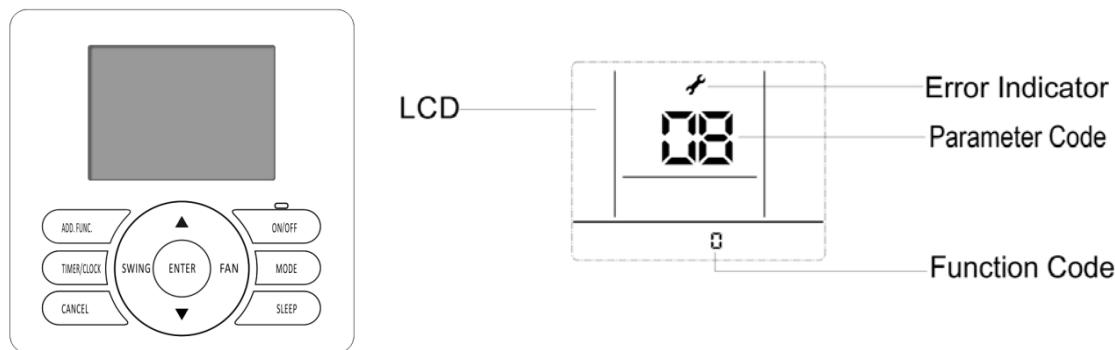

Running parameter can be referred by digital tube switch or specified wire remote controller.

Query by wire remote controller (YXE-C01U,YXE-C02U,YXE-D01U)

Operation:

1. Connect wire remote controller with indoor unit(same method as Indoor unit parameter revise)

2. Changing system parameter

OPERATION:

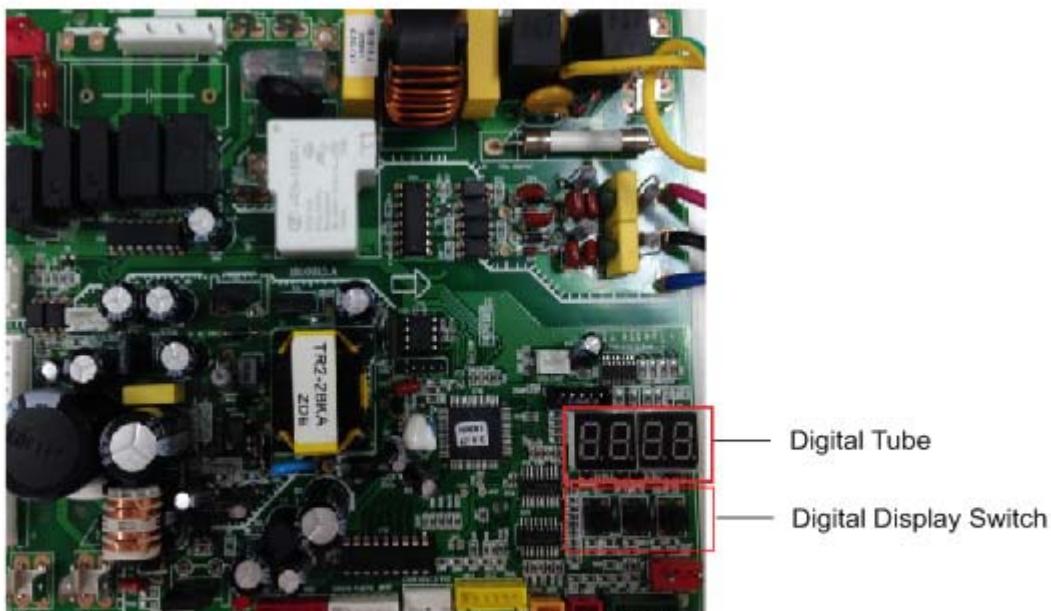

- ① Hold down both "MODE" button and "ADD.FUNC." button for 3 seconds, symbol and parameter number blinking at the same time.
- ② Press "" to select parameter number as you need, parameter value will be displayed on the LCD.

Parameter Code	Parameter Description
06	Indoor unit air inlet temperature
07	Indoor unit coil sensor temperature
08	Outdoor unit ambient sensor temperature
09	Discharge temperature
10	Suction temperature
11	Outdoor coil temperature
12	Discharge pressure
13	Suction pressure
14	Outdoor EEV opening
15	AC current input
16	AC voltage
24	Fault code
25	Drive fault code
26	Indoor unit air outlet temperature
28	Compressor current
29	Indoor unit room temperature
30	Indoor unit coil inlet temperature
31	Indoor unit coil outlet temperature
32	Outdoor unit condenser inlet temperature
33	Outdoor unit condenser outlet temperature
43	Outdoor unit defrost temperature
57	Outdoor fan 1 speed
58	Outdoor fan 2 speed
60	Indoor fan speed

Note:For some models, some parameter values will not display on the wired controller.

11. WIRING DIAGRAM

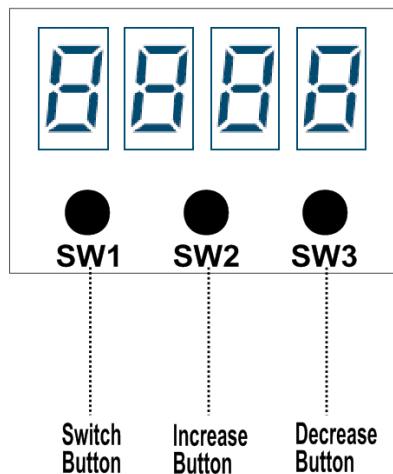

Query by digital tube switch

DC-Inverter outdoor control board

Digital Display Switch Introduction

It can be used to check outdoor running parameters.

There are 3 buttons on the digital display board :

- 1) SWITCH button : Indoor parameters and outdoor parameters can be selected in turn by pressing it.
“P”-outdoor unit parameter , “H.”-indoor unit parameter ;
- 2)INCREASE button :Each time it is pressed, the number rises by 1,hold down it, the number will be rapidly increase;
- 3) DECREASE button : Each time it is pressed, the number lowers by 1,hold down it, the number will be

11. WIRING DIAGRAM

be rapidly decreased.

- 4) The parameters will be displayed after 3s when the checking numbers are selected.

Parameters can be checked as following table below.

Parameter code	Descriptions
0	Protect Code or Fault code
P.1	Target Frequency
P.2	Driving Frequency
P.4	Outdoor EEV Opening
P.5	Outdoor EEV Target Opening
P.6	Upper DC Motor Revolving Speed
P.8	AC Input Voltage
P.9	Current
P.10	Modular Temperature
P.11	Capacity Needed
P.12	Modular Fault
P.20	Outdoor Ambient Temperature
P.21	Outdoor Coil Temperature
P.22	Outdoor Defrost Temperature
P.23	Suction Temperature
P.24	Discharge Temperature
H.1	Indoor Unit Fault
H.2	Indoor Ambient Temperature
H.3	Indoor Coil Temperature
H.4	Indoor Setting Temperature

11. WIRING DIAGRAM

11.5 Instructions for the function setting of access control, fire protection

11.5.1 Factory setting

In case of using or cancelling the access control / fire protection function, use the wired controller to modify the parameters of indoor unit.

Note: please refer to " Indoor unit parameter revise " section in TC Manual for how to use the wired controller to modify the parameters of indoor unit.

11.5.2 Function introduction

(1) Access control: control mode to control the machine startup & shutdown based on the on & off state of the access control port.

(2) Fire protection: control mode to control the machine startup & shutdown based on the on & off state of the fire protection port.

11.5.3 Function setting

(1) Hardware connection

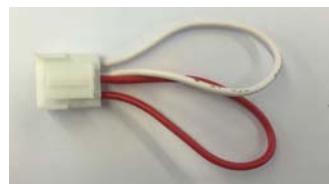

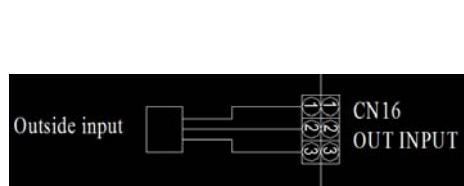

Figure 1 electrical wiring diagram

Figure 2 short wiring

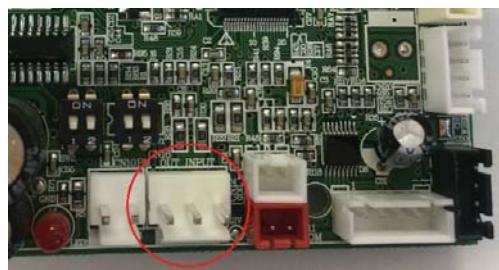

Figure 3 main control board

3 pins of the OUT INPUT CN16 socket shown in the electrical wiring diagram of Figure 1 are short circuited state under as factory default(an external short circuit plug shown as Figure 2, and the OUT INPUT CN16 socket of main control board is shown as Figure 3).

(Illustration: the socket number in circuit is subject to the actual serial number of PCB.)

- 1) When using the door lock function, the red wire should be cut and connect the door lock control switch attached to it (supplied by user), and the connecting wire should be 22AWG or above. The door lock switch is closed normal operation and open contact when the equipment must be stopped.
- 2) When using the fire protection function, the red wire should be cut and connect the fire protection lock control switch attached to it(supplied by user), and the connecting wire should be 22AWG or above . The protection control switch is closed normal operation and open contact when the equipment must be stopped.

11. WIRING DIAGRAM

(2) Timing sequence description:

- Access control:

- 1) Control of entrance card disconnection: the air conditioner will be shut down after the access control signal is disconnected for 30 seconds. In this state, the indoor unit can't start. If the user performs start operation, the wired controller will not respond and displays power-off status.
- 2) Control of entrance card connection: after the closed circuit of entrance card interface, power-on restrictions are released, the wired controller maintains power-off and the startup & shutdown control is enabled.

- Fire protection

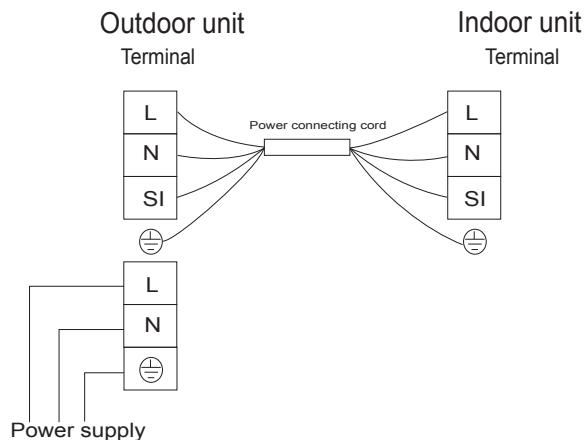

- 1) Access to fire protection: the air conditioner will be shut down and won't blow air after the access control signal is disconnected for 30 seconds. In this state, the indoor unit can't be started. If the user performs start operation, the wired controller shall not respond and displays power-off status.
- 2) Cancellation of fire protection: after the short circuit of fire protection signal, release power-on restrictions, the wired controller maintains power-off status and the startup & shutdown control is enabled.

(3) Relative priorities of instructions

Access control and fire prevention functions shall not affect each other.

11. WIRING DIAGRAM

11.6 Common Wiring

18K/24K/36K

Recommend Wire Size

Model Capacity(Btu/h)	Power Supply	ELB		Power Source Cable Size	Transmitting Cable Size
		Nominal Current(A)	Nominal Sensitive Current (mA)		
18K	220-240V ~,50Hz	20	30	3×2.5mm ²	4×1.5mm ²
24K	220-240V ~,50Hz	32	30	3×2.5mm ²	4×1.5mm ²
36K	220-240V ~,50Hz	40	30	3×4.0mm ²	4×1.5mm ²

Max. Running Current(A):REFER TO NAMEPLATE

- Use an ELB (Electric Leakage Breaker). If not used, it will cause an electric shock or a fire.
- Do not operate the system until all the check points have been cleared.
 - (A) Check to ensure that the insulation resistance is more than 2 megohm, by measuring the resistance between ground and the terminal of the electrical parts. If not, do not operate the system until the electrical leakage is found and repaired.
 - (B) Check to ensure that the stop valves of the outdoor unit are fully opened and then start the system.
- Pay attention to the following items while the system is running.
 - (A) Do not touch any of the parts by hand at the discharge gas side, since the compressor chamber and the pipes at the discharge side are heated higher than 90°C.

11. WIRING DIAGRAM

(B) DO NOT PUSH THE BUTTON OF THE MAGNETIC SWITCH(ES). It will cause a serious Accident.

NOTES:

- 1) Follow local codes and regulations when selecting field wires.
- 2) The wire sizes marked in the table are selected at the maximum current of the unit according to the European Standard ,EN60335-1. Use the wires which are not lighter than the ordinary tough rubber sheathed flexible cord (code designation H07RN-F) or ordinary polychloroprene sheathed flexible cord (code designation H07RN-F).
- 3) Use a shielded cable for the transmitting circuit and connect it to ground.
- 4) In the case that power cables are connected in series, add each unit maximum current and select wires below.

Selection According to EN60335-1

Current i(A)	Wire Size(mm^2)
$i \leq 6$	0.75
$6 < i \leq 10$	1
$10 < i \leq 16$	1.5
$16 < i \leq 25$	2.5
$25 < i \leq 32$	4
$32 < i \leq 40$	6
$40 < i \leq 63$	10
$63 < i$	*

* in the case that current exceeds 63A, do not connect cables in series.

11. WIRING DIAGRAM

12. PIPING WORK AND REFRIGERANT CHARGE

12. Piping work and refrigerant charge

12.1 MAX. length allowed

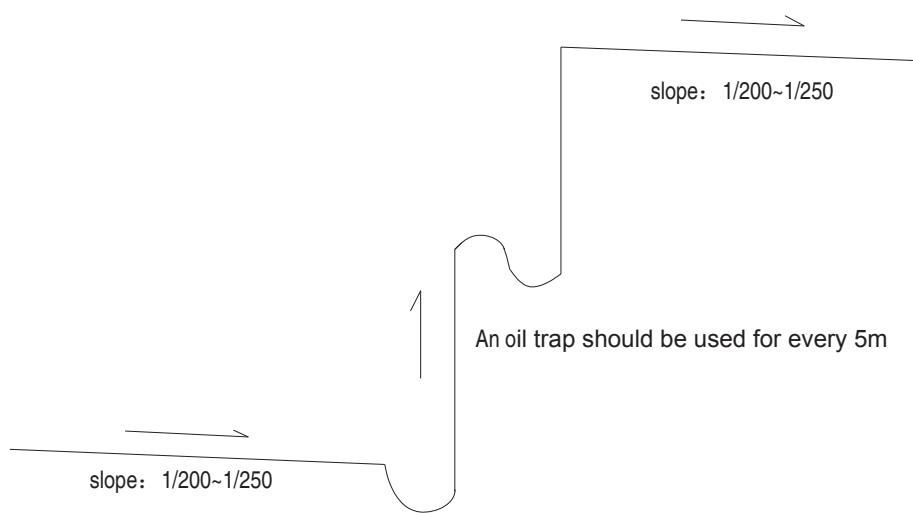

*Do your best to reduce the pipe length. Long pipe may cause capacity decrease.

Refrigerant precharge for a piping length of 5m is charged in the outdoor unit at the factory. When the piping is longer than 5m, additional refrigerant is necessary.

12.2 Oil trap

When the indoor unit is lower than outdoor unit and height is larger than 5m, an oil trap should be used for every 5m.

12. PIPING WORK AND REFRIGERANT CHARGE

NOTE:

1. When the indoor unit is lower than outdoor unit for more than 5m, an oil trap should be used on suction piping.

To avoid storing too much oil in the oil trap ,the oil trap should be as short as possible.

2. The horizontal piping should be slope down along the refrigerant flow direction, to bring the oil back to compressor, the slope is about 1/200 to 1/250.

In order to ensure cooling/heating performance better, the refrigerant piping should be as short and straight as possible.

12.3 Additional refrigerant charge

Although refrigerant has been charged into this unit, additional refrigerant charge is required according to piping length.

- The additional refrigerant precharge quantity should be determined and charged into the system according to the following procedure.
- Record the additional refrigerant quantity in order to facilitate maintenance and servicing activities.

Refrigerant charge before shipment (W_0 (kg))

W_0 is the outdoor unit refrigerant charge before shipment ;

X_g is additional refrigerant outdoor unit needed to charge according to piping length during installation .

Model	Refrigerant precharged before shipment(W_0 (g))	Total refrigerant pipe length	
		0m~5m	5m~30m
18K	1240	0g	$X_g = 15g / m \times (\text{Total pipe length}(m) - 5)$
24K	1700	0g	$X_g = 35g / m \times (\text{Total pipe length}(m) - 5)$
36K	2100	0g	

13. CONTROL MODE

13. Control mode

13.1 Indoor unit mode control

1. Main general technical parameters

- (1) Remote receiver distance: 8 m.
- (2) Remote receiver angle: Less than 80 degrees.
- (3) Temperature control accuracy: $\pm 1^{\circ}\text{C}$.
- (4) Time error: Less than 1%.

2. Functions of the controller

Control function

2.1 Emergency switch

Press the emergency button can realize the starting or closing Machine, starting up according to the automatic mode of operation.

- (1) Press this button to turn ON the unit, the conditioner will be run with auto mode, and press it again to turn off.
- (2) When the machine is OFF, press and hold the emergency switch for 5 seconds, with 3 beeps, the indoor unit would turn to emergency running. In such station, machine would be forced to turn to cooling operation with high speed, the flaps sweeping and the air conditioner's operation is irrelevant with room temperatures.
- (3) If a remote signal has been received during the emergency run, the machine will operate upon the command of such a remote signal.

2.2 Operator-machine communication

Air conditioning and remote controller is provided with a temperature sensor. The remote controller on the temperature sensor to detect the default settings of room temperature at room temperature. If the indoor control unit for long time have not received remote control signal, will automatically switch to the air conditioner body temperature sensor.

2.3 Timer function

(1) Timer on:

When set to start in a time by the remote controller, the air conditioner starts in the timer on condition. When the set time is up, the air conditioner will turn on and operates in the

13. CONTROL MODE

preset conditions after receiving a signal from the remote controller. If the air conditioner has not received a signal from the remote controller when the set time is up, it will automatically start and operate in the preset conditions.

(2) Timer off:

When set to stop in a set time by the remote controller, the air conditioner will start in the timer off condition. When the set time is up, the air conditioner will turn off after receiving a signal from the remote controller. If the air conditioner has not received a signal from the remote controller when the set time is up, it will turn off automatically.

(3) Neither the turning on nor turning off operation will cancel the timer function.

2.4 Sleep

(1) In the heating, cooling or dehumidifying mode, press the "Sleep" button on the remote controller to start or cancel the sleep function in turn, and at the same time the sleep icon on the display screen will be on or off accordingly.

(2) In the heating mode, the set temperature will decrease automatically after the sleep function is started.

(3) In the cooling mode, the set temperature will rise automatically after the sleep function is started.

(4) In default, the setting is to cancel the sleep function. Turning off the unit will also cancel the sleep function.

2.5 High efficient run function (only for some remote controller)

In Cooling, Dehumidification, Fan mode, press the "HIGH POWER " to enter the refrigeration mode, set the temperature automatically adjust to lowest temp.; the Fan speed is powerful speed; frequency of high frequency operation.

In heating mode, press the "HIGH POWER " to enter the refrigeration mode, set the temperature automatically adjust to highest temp.; the Fan speed is powerful speed; frequency of high frequency operation.

2.6 mute function (only for some remote controller)

In the indoor machine operation mode , You may turn on mute function and turn off mute function by mute key, The air conditioner will run by mute fan speed in mute mode.

13. CONTROL MODE

2.7 prevent cooling wind mode

In the heating-run, to prevent the indoor fan from blowing cold air, the indoor fan will stop or run slowly until the coil is warmth.

2.8 blow waste heating and waste cooling function

The heating mode, remote shutdown, such as indoor heat exchanger temperature is higher, the wind blowing out opportunities continue to run the waste heat.

Cool and dehumidification mode , after the compressor close, indoor machine will continue to set the speed of operation for a period of time.

2.9 Dehumidifying method:

Remote control setting dehumidifying mode, indoor machine forced to run at low speed

(high power key or a strong bond also maintain a low wind speed) , the outdoor machine according to the refrigeration mode operation.

2.10 Self Recovery of Power Break

When the power supply is recovered after break, all preset are still effective and the air-conditioner can run according to the previous setting.

How to set/cancel

It can be set /cancel by wire remote controller.

Details see Internal control parameter adjustment.

2.11 Fault code

The fault code can be showed by LED on the indoor panel.

2.12 Filter clean

Filer clean led will light up when air filter is clogged with dust.

How to set/cancel

It can be set /cancel by wire remote controller.

Details see Internal control parameter adjustment.

13. CONTROL MODE

13.2 Outdoor unit mode control

Control function

1. Cooling Anti-freeze Protection

To prevent indoor air conditioner evaporator temperature is too low, the indoor coil sensor for real time detection of evaporator. If the indoor coil temperature is too low, the compressor will protect.

2. Overload Protection

Air can heat exchanger temperature sensor for monitoring, when the sensor when the temperature is too high, the compressor will be automatic protection

3. Exhaust temperature protection

To prevent deterioration due to high exhaust temperature of compressor, the machine will realize the real-time detection of the temperature of exhaust gas. If the temperature is too high compressor automatic protection

4. Oil-return Control

When the compressor runs for a long time low frequencies, control system will start the return oil program. The system in the oil return to the compressor.

5. Operation Mode

Air conditioning mode is the operation mode set by users through remote controller, four modes are available: cooling, heating, dehumidification, as well as fan mode.

6. Four-way Valve Control

Four-way valve of the outdoor machine shuts down when cooling and defrosting but starts when heating. During the heating process, the four way valve to stop working for a period of time after compressor disconnect.

7. Start-up Protecti

To prevent compressor from restart frequently in the condition that system pressure has not been completely balanced, it can't be restarted within 3 minutes.

8. Pressure Protection

When the pressure increases to a preset value, the pressure switch will automatically protect. Compressor will stop and report the fault code protection.

14. TROUBLESHOOTING

14. Troubleshooting

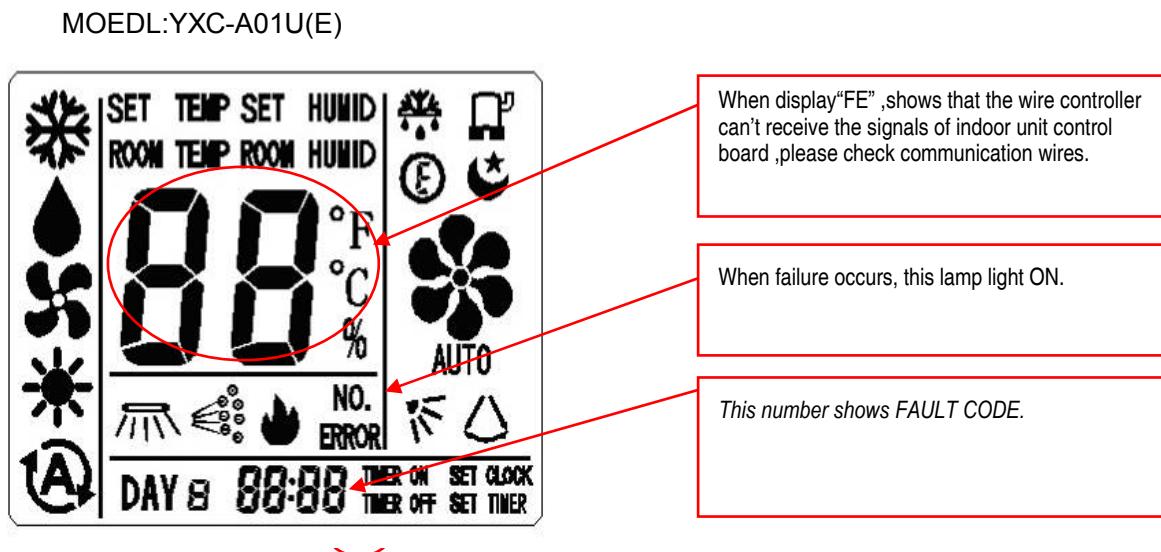

14.1 Trouble guide

When the air conditioner failure occurs, the fault code will displays on control board , wire remote controller or display panel.

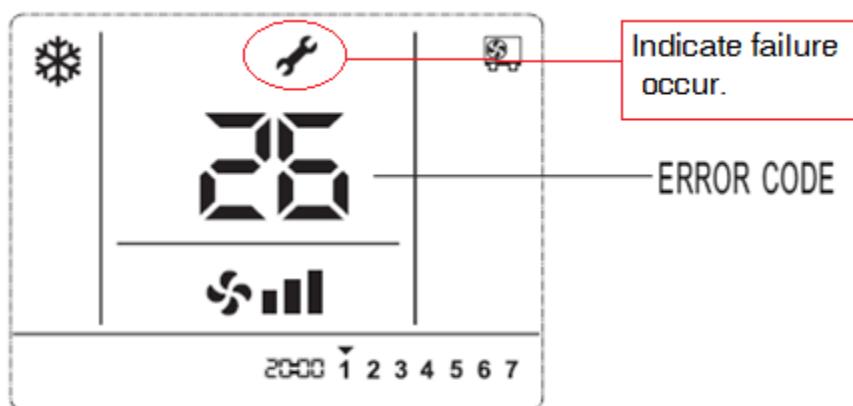

How to check fault codes

Indoor Unit

(1) Fault codes indicated by wire remote controller (see figure below)

MODEL:YXC-C01U/YXE-C01U/YXC-D01U/YXE-D01U(E)

When the airconditioner is malfunction, will display on the LCD, and error codes will appear and blink.

FIG.2 FAULT CODE DISPLAY ON WIRE REMOT CONTROLLER

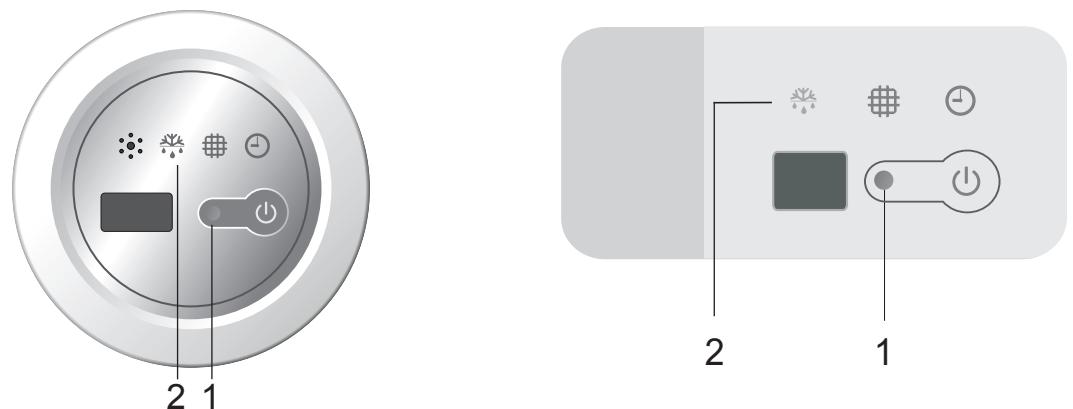

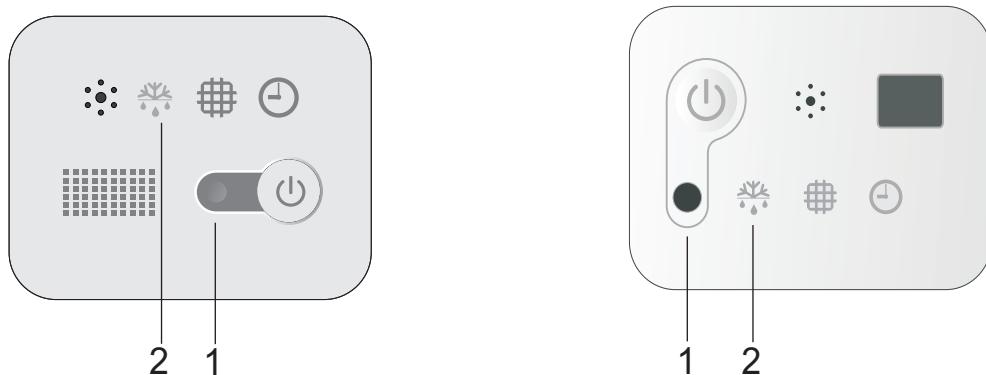

14. TROUBLESHOOTING

(2) Fault codes indicated by LED lamps on display panel

Lamp RUN(LED2 ,red) and Lamp DEFROST (LED5 ,green) flashing, Lamp RUN display fault code ten digit number, lamp DEFROST display fault code single digit number (as shown fig. below).

For example, fault code 36: led RUN& defrost flash 3 times at the same time, and led DEFROST continue flash 3 times, reports No. 36 fault.

Display panel

- 1** Run indicator (Red)
Indicates the fault code ten digital number.
- 2** Defrost indicator (Green)
Indicates the fault code singal digital number.

LED FALSH CONTROL: flash 300mS(T1), off 300mS(T2), after 2000mS(T3)fault code repeat displays. (as shown below)

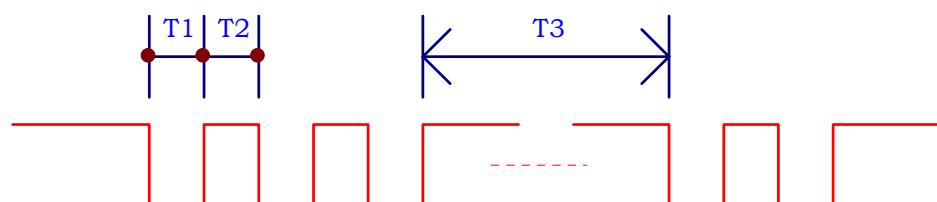

Fig.2 LED FALSH CONTROL

14. TROUBLESHOOTING

Outdoor Unit

DC-Inverter unitary 18K,24K(Main control board upside-down)

Fault code displays by LED lamps on outdoor main control board.

There are 3 LED lamps on control board, LED1,LED2 and LED3.

LED1 indicate fault code ten digit number, LED2 indicate fault code single digit number and LED3 indicate outdoor drive control fault .

When LED3 is off, LED1 and LED 2 indicate main control failure code.

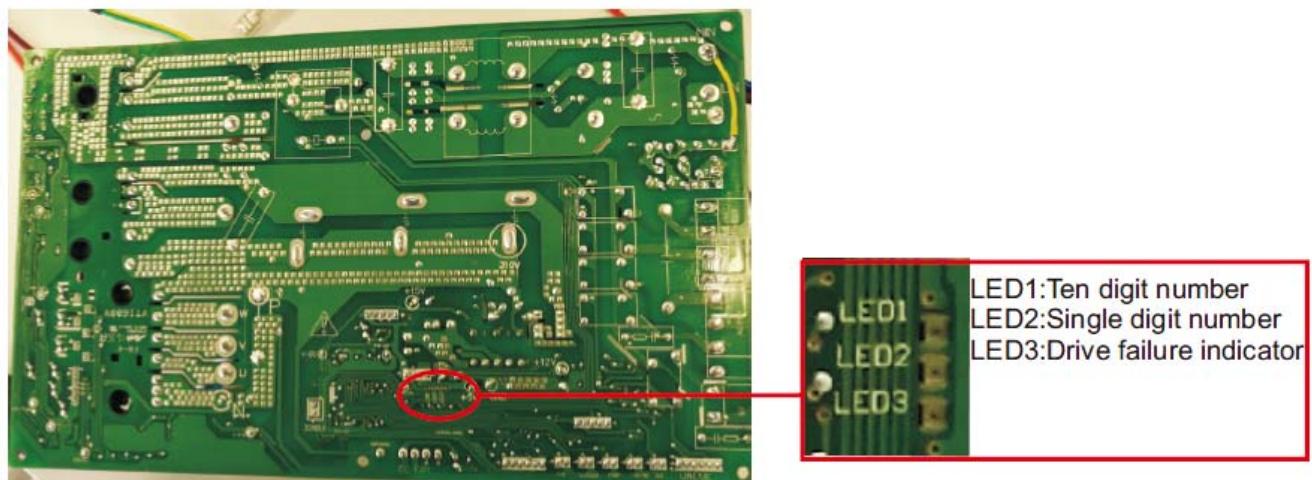

When LED3 is on, LED1 and LED 2 indicate drive control failure code.

When LED3 is flickering and LED1,LED 2 are all off, indicate compressor is preheating .

Failures display with 5s interval .It means LED will off 5s to report next failure code .

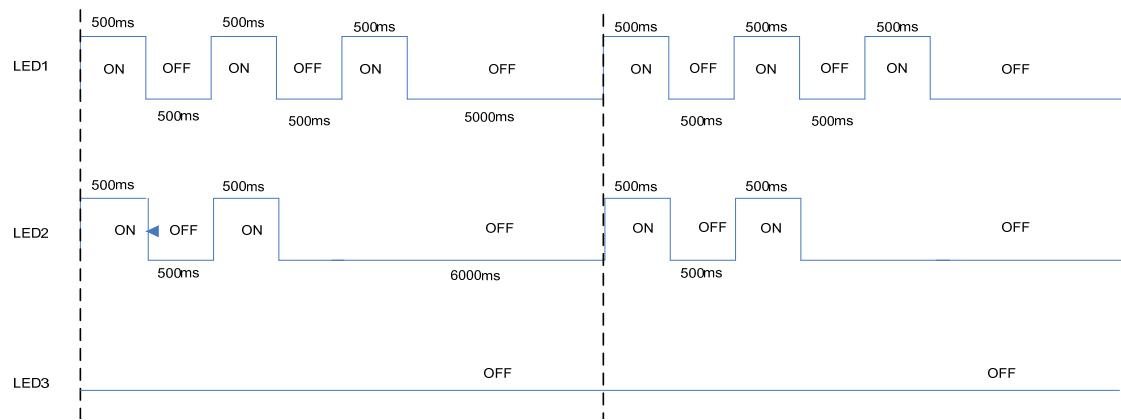

System protect codes display method is the same with main control failure code .

LED lamps will off when there is no failure ,protect or preheating.

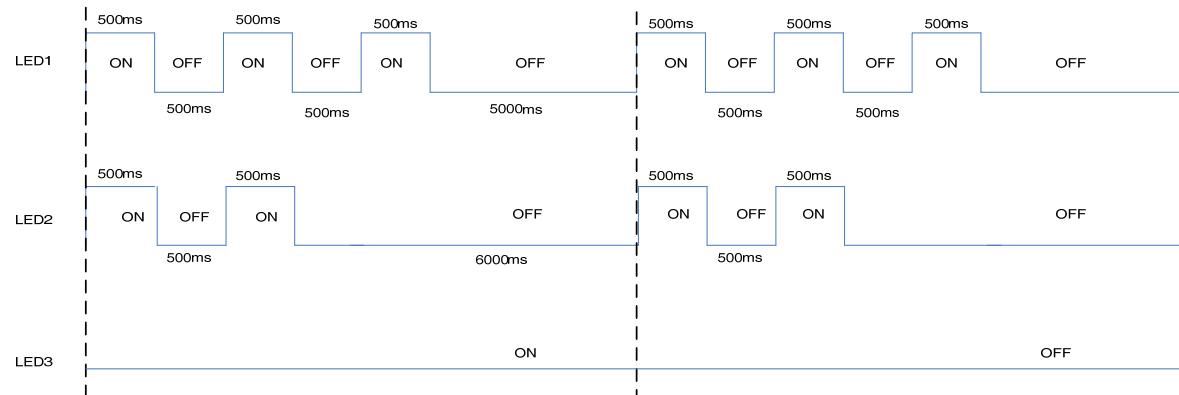

14. TROUBLESHOOTING

For example, outdoor main control fault 32:

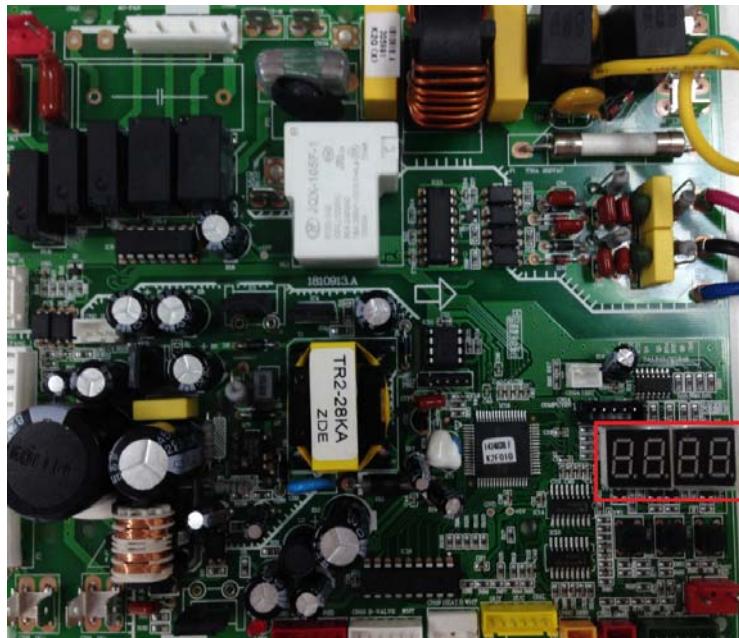

For example, outdoor drive fault 32:

14. TROUBLESHOOTING

(2) INVERTER UNITARY AIR CONDITIONER (36K) :

Fault code will display on digital tube board.

Outdoor Control Board

Digital Tube

shows failure occur

Display ERROR Code

14. TROUBLESHOOTING

14.2 Fault codes

The following is the fault code table of outdoor.

Sheet 1 Outdoor Fault code

Fault code	Fault Description	Possible Reason of Abnormality	How to Deal With	Remarks
1	Outdoor ambient temperature sensor fault	1.The outdoor ambient temperature sensor connect loose; 2.The outdoor ambient temperature sensor is failure; 3.The sampling circuit is failure	1.Reconnect the outdoor ambient temperature sensor; 2.Replace the outdoor ambient temperature sensor components; 3.Replace the outdoor control board components.	
2	Outdoor coil temperature sensor fault	1.The outdoor coil temperature sensor connect loose; 2.The outdoor coil temperature sensor is failure; 3.The sampling circuit is failure	1.Reconnect the outdoor coil temperature sensor; 2.Replace the outdoor coil temperature sensor components; 3.Replace the outdoor control board components.	
3	The unit over-current turn off fault	1.Control board current sampling circuit is failure; 2.The current is over high because of the supply voltage is too low; 3.The compressor is blocked; 4. Overload in cooling mode; 5.Overload in heating mode.	1. Replace the electrical control board components; 2. Normally protection; 3. Replace the compressor; 4. Please see the Note 3; 5. Please see the Note 4.	
4	EEprom Data error	1.EE components is failure; 2.EE components control circuit failure; 3.EE components insert incorrect	1.Replace the EE components; 2.Replace the outdoor control board components; 3.Reassembly the EE components.	
5	Cooling freezing protection(the indoor coil temperature is too low) or heating overload(indoor coil temperature is too high)	1.The indoor unit can not blow air normally; 2.The room temperature is too low in cooling mode or the room temperature is too high in heating; 3.The filter is dirty; 4.The duct resistance is too high to result in low air flow; 5.The setting fan speed is too low; 6. The indoor unit is not standard installed, air inlet is too near with air outlet .	1.Check the indoor fan, indoor fan motor and evaporator whether normally; 2. Normally protection; 3.Clean the filter; 4.Check the volume control valve,duct length etc; 5.Set the speed with high speed; 6.Reinstall the indoor unit refer to the user manual to change the distance between the indoor unit and the wall or ceiling.	

14. TROUBLESHOOTING

Fault code	Fault Description	Possible Reason of Abnormality	How to Deal With	Remarks
7	The communication fault between the indoor unit and outdoor unit	1.The connection cable connect wrong between the indoor unit and outdoor unit; 2.The communication cable connect loose; 3.The communication cable is fault; 4.The indoor control board is fault; 5.The outdoor control board is fault; 6.Communication circuit fuse open; 7.The specification of communication cable is incorrect.	1.Reconnect the connection cable refer to the wiring diagram; 2.Reconnect the communication cable; 3.Replace the communication cable; 4.Replace the indoor control board; 5.Replace the outdoor control board; 6.Check the communication circuit, adjust the DIP switch and the short-circuit fuse. 7.Choose suitable communication cable refer to the user manual	
12	voltage absent phase	1.Three-phase power is abnormal; 2.The outdoor wiring connect wrong; 3.The outdoor control board is failure.	1. Normally protection 2. Check the wiring connection refer to the wiring diagram; 3. Replace the outdoor control board	Application of three-phase power supply models
13	Compressor overheat protector device	1.The wiring of the overload protector connect loose. 2. The overload protector is failure . 3. The refrigerant is not enough; 4. The installation pipe is too long than normal, but not add the enough refrigerant; 5. The expansion valve is failure; 6. The outdoor control board is failure	1. Reconnect the wiring of the overload protector; 2. Replace the overload protector; 3. Check the welding point of the unit to confirm whether it is leakage, and then recharge the refrigerant; 4. Add the refrigerant; 5. Replace expansion valve; 6. Replace the outdoor control board.	
14	the high pressure switch operate or the unit turn off for high pressure protection	1.The wiring of the high pressure protector connect loose; 2.The high pressure protector is failure; 3.The outdoor control board is abnormal; 4. Overload in cooling; 5. Overload in heating.	1.Reconnect the wiring the high pressure protector; 2. Replace the high pressure protector; 3. Replace the outdoor control board; 4. Please refer to the Note 3; 5. Please refer to the Note 4.	Applied to models with high pressure switch or pressure sensor
15	the low pressure switch protection or the unit turn off for low pressure protection	1.The wiring of the low pressure switch connect loose ; 2.The low pressure switch is failure; 3.The refrigerant is not enough; 4.The expansion valve failure in heating mode; 5.The outdoor control board is abnormal.	1. Reconnect the wiring of the low pressure switch; 2. Replace the low pressure switch; 3.Check the welding point to confirm whether the unit is leakage, and then add some refrigerant; 4. Replace the expansion valve; 5. Replace the outdoor control board.	Applied to models with low pressure switch or pressure sensor
16	overload protection in cooling mode	System overload	Please refer to the Note 3.	
17	Discharge temperature sensor fault	1.The wiring of the discharge temperature sensor connect loose; 2.The discharge temperature sensor is failure; 3.The sampling circuit is abnormal.	1.Reconnect the wiring of the discharge temperature sensor; 2.Replace the discharge temperature sensor; 3.Replace the outdoor control board.	

14. TROUBLESHOOTING

Fault code	Fault Description	Possible Reason of Abnormality	How to Deal With	Remarks
7	The communication fault between the indoor unit and outdoor unit	1.The connection cable connect wrong between the indoor unit and outdoor unit; 2.The communication cable connect loose; 3.The communication cable is fault; 4.The indoor control board is fault; 5.The outdoor control board is fault; 6.Communication circuit fuse open; 7.The specification of communication cable is incorrect.	1.Reconnect the connection cable refer to the wiring diagram; 2.Reconnect the communication cable; 3.Replace the communication cable; 4.Replace the indoor control board; 5.Replace the outdoor control board; 6.Check the communication circuit, adjust the DIP switch and the short-circuit fuse. 7.Choose suitable communication cable refer to the user manual	
12	voltage absent phase	1.Three-phase power is abnormal; 2.The outdoor wiring connect wrong; 3.The outdoor control board is failure.	1. Normally protection 2. Check the wiring connection refer to the wiring diagram; 3. Replace the outdoor control board	Application of three-phase power supply models
13	Compressor overheat protector device	1.The wiring of the overload protector connect loose. 2. The overload protector is failure . 3. The refrigerant is not enough; 4. The installation pipe is too long than normal, but not add the enough refrigerant; 5. The expansion valve is failure; 6. The outdoor control board is failure	1. Reconnect the wiring of the overload protector; 2. Replace the overload protector; 3. Check the welding point of the unit to confirm whether it is leakage, and then recharge the refrigerant; 4. Add the refrigerant; 5. Replace expansion valve; 6. Replace the outdoor control board.	
14	the high pressure switch operate or the unit turn off for high pressure protection	1.The wiring of the high pressure protector connect loose; 2.The high pressure protector is failure; 3.The outdoor control board is abnormal; 4. Overload in cooling; 5. Overload in heating.	1.Reconnect the wiring the high pressure protector; 2. Replace the high pressure protector; 3. Replace the outdoor control board; 4. Please refer to the Note 3; 5. Please refer to the Note 4.	Applied to models with high pressure switch or pressure sensor
15	the low pressure switch protection or the unit turn off for low pressure protection	1.The wiring of the low pressure switch connect loose ; 2.The low pressure switch is failure; 3.The refrigerant is not enough; 4.The expansion valve failure in heating mode; 5.The outdoor control board is abnormal.	1. Reconnect the wiring of the low pressure switch; 2. Replace the low pressure switch; 3.Check the welding point to confirm whether the unit is leakage, and then add some refrigerant; 4. Replace the expansion valve; 5. Replace the outdoor control board.	Applied to models with low pressure switch or pressure sensor
16	overload protection in cooling mode	System overload	Please refer to the Note 3.	
17	Discharge temperature sensor fault	1.The wiring of the discharge temperature sensor connect loose; 2.The discharge temperature sensor is failure; 3.The sampling circuit is abnormal.	1.Reconnect the wiring of the discharge temperature sensor; 2.Replace the discharge temperature sensor; 3.Replace the outdoor control board.	

14. TROUBLESHOOTING

Fault code	Fault Description	Possible Reason of Abnormality	How to Deal With	Remarks
96	the refrigerant of the unit is not enough fault	The refrigerant of the unit is not enough	Discharge the refrigerant and charge the refrigerant refer to the rating label	
97	4-way valve commutation failure fault	1.The wiring of the 4-way valve coil connect loose; 2.The 4-way valve coil is failure; 3.The 4-way valve is failure; 4.The driver board of the 4-way valve is failure	1. Reconnect the wiring of the 4-way valve; 2. Replace the 4-way valve coil; 3. Replace the 4-way valve; 4.Replace the driver board of the 4-way valve.	

14. TROUBLESHOOTING

The following is the fault code table of indoor.

Sheet 2 Indoor fault code

Fault code	Fault Description	Possible Reason of Abnormality	How to Deal With	Remarks
51	Drainage protection	1. The water level of the drain pan exceed safe level; 2. The cable of the water level switch connect loose; 3. The water level switch is failure; 4. The control board is failure.	1.1 Check whether there are something to block the drain hose or the height of the drain hose is too high; 1.2 Check the water pump and replace the water pump if the water pump is failure; 2. Reconnect the cable of the water level switch refer to the wiring diagram; 3. Replace the water level switch; 4. Replace the control board.	
64	Communication between Indoor & Outdoor unit Fault	1. The connection cable between the indoor unit and the outdoor unit connect wrong; 2. The communication cable connect loose; 3. The communication cable between the indoor unit and the outdoor unit is failure or the cable between the indoor control board to terminal is failure or the cable between the outdoor control board to the terminal is failure; 4. The indoor control board is failure; 5. The outdoor control board is failure.	1. Reconnect the connection cable refer to the indoor and outdoor wiring diagram; 2. Reconnect the communication cable refer to the indoor and outdoor wiring diagram; 3. Replace the communication cable refer to the indoor and outdoor wiring diagram; 4. Replace the indoor control board; 5. Replace the outdoor control board.	
72	Indoor fan motor fault	1. The cable of the indoor fan motor connect loose; 2. The cable of the indoor fan motor is failure; 3. The indoor fan motor is failure; 4. The indoor control board is failure.	1. Reconnect the cable of the fan motor; 2. Replace the cable of the fan motor; 3. Replace the fan motor; 4. Replace the indoor control board; 5. Check the indoor fan and ensure the indoor fan can run normally.	
73	Indoor EEPROM Data 1 fault	1. Indoor EE components is failure; 2. The control circuit of the EE components is failure; 3. The EE components has been inserted with opposite direction.	1. Replace the EE components; 2. Replace the indoor control board; 3. Reassembly the EE components of the indoor control board.	
74	Indoor EEPROM Data 2 error	EE in MCU is failure, the unit can run, but the function user has set is ineffective.	Replace EE data in MCU.	
81	Indoor ambient Temperature Sensor Fault	1. The cable of the room temperature sensor connect loose; 2. The room temperature sensor is failure; 3. The sampling circuit is abnormally.	1. Reconnect the cable of the room temperature sensor; 2. Replace the room temperature sensor; 3. Replace the indoor control board.	

14. TROUBLESHOOTING

Fault code	Fault Description	Possible Reason of Abnormality	How to Deal With	Remarks
83	Evaporator Middle Temperature Sensor Fault	1.The cable of the coil temperature sensor of the evaporator is failure; 2. The coil temperature sensor of the evaporator is failure; 3. The sampling circuit is abnormally	1. Reconnect the cable of the coil temperature sensor of the evaporator; 2. Replace the coil temperature sensor of the evaporator; 3. Replace the indoor control board.	
FE (254)	Communication between main control board &Wiring remote controller Fault (display on wiring remote controller)	1. The wiring between the wiring controller to the indoor control board connect loose; 2. The sequence of the wiring between the wiring controller to the indoor control board is wrong; 3. The wiring between the wiring controller to the indoor control board is failure; 4. The wiring controller is failure; 5. The indoor control board is abnormally	1.Reconnect the wiring between the wiring controller to the indoor control board; 2.Replace the wiring between the wiring controller to the indoor control board; 3.Replace the wiring between the wiring controller to the indoor control board; 4. Replace the wiring controller; 5. Replace the indoor control board	
ER	Communication between main control board &display board Fault (displays on display board)	1.The wiring between the display board to the indoor control board connect loose; 2.The sequence of the wiring between the display board to the indoor control board is wrong; 3.The wiring between the display board to the indoor control board is failure; 4. The display board is failure; 5. The indoor control board is failure.	1. Reconnect the between the display board to the indoor control board; 2. Replace the wiring between the display board to the indoor control board; 3. Replace the wiring between the display board to the indoor control board; 4. Replace the display board; 5. Replace the indoor control board.	

NOTE 1:

If the indoor unit can not turn on or the indoor unit turn off itself after 30s, at the same time the unit do not display the fault code, please check the fire and the socket of the control board.

Note 2:

If the indoor unit display the 75,76,77,78 fault code after you turn on the unit, please check the TEST seat of the indoor control board or the TEST detection circuit whether exists short circuit.

14. TROUBLESHOOTING

Note 3:Overload in cooling mode

Sheet 3 Overload in cooling mode

overload in cooling mode		
sr.	The root cause	Corrective measure
1	The refrigerant is excessive	Discharge the refrigerant, and recharge the refrigerant refer to the rating label
2	The outdoor ambient temperature is too high	Please use within allowable temperature range
3	The air outlet and air inlet of the outdoor unit is short-circuit	Adjust the installation of the outdoor unit refer to the user manual
4	The outdoor heat exchanger is dirty, such as condenser	Clean the heat exchanger of the outdoor unit, such as condenser
5	The speed of the outdoor fan motor is too low	Check the outdoor fan motor and fan capacitor
6	The outdoor fan is broken or the outdoor fan is blocked	Check the outdoor fan
7	The air inlet and outlet has been blocked	Remove the blocked thing
8	The expansion valve or the capillary is failure	Replace the expansion valve or the capillary

Note 4:Over load in heating mode

Sheet 4 Overload in heating mode

Overload in heating mode		
sr.	The root cause	Corrective measure
1	The refrigerant is excessive	Discharge the refrigerant, and recharge the refrigerant refer to the rating label
2	The indoor ambient temperature is too high	Please use within allowable temperature range
3	The air outlet and air inlet of the indoor unit is short-circuit	Adjust the installation of the indoor unit refer to the user manual
4	The indoor filter is dirty	Clean the indoor filter
5	The speed of the indoor fan motor is too low	Check the indoor fan motor and fan capacitor
6	The indoor fan is broken or the outdoor fan is blocked	Check the indoor fan
7	The air inlet and outlet has been blocked	Remove the blocked thing
8	The expansion valve or the capillary is failure	Replace the expansion valve or the capillary

14. TROUBLESHOOTING

Sheet 5 Drive Fault code(18K/24K)

Fault code	Fault Description	Possible Reason of Abnormality	How to Deal With
1	Inverter DC voltage overload fault	1.Power supply input too high or too low; 2.Driver board fault.	1.Check power supply 2.Change driver board.
2	Inverter DC low voltage fault		
3	Inverter AC current overload fault		
4	Out-of-step detection		
5	Loss phase detection fault (speed pulsation)	1.Compressor phase lost ; 2.Bad driver board components ; 3.The compressor insulation fault	1.Check compressor wire connect ; 2.Change driver board ; 3.Change compressor.
6	Loss phase detection fault (current imbalance)		
7	Inverter IPM fault (edge)	1.System overload or current overload; 2.Driver board fault.	
8	Inverter IPM fault (level)	3.Compressor oil shortage, serious wear of crankshaft ;	1.Check the system . 2.Change driver board;
9	PFC_IPM IPM fault (edge)	4.The compressor insulation fault	3.Change the compressor; 4.Change the compressor.
10	PFC_IPM IPM fault (level)		
11	PFC power detection of failure	1.The power supply is not stable ; 2.The instantaneous power failure ; 3.Driver board failure.	1.Check the power supply. 2.Not abnormal. 3.Change the driver board.
12	PFC overload current detection of failure.	1.System overload, current too high; 2.Driver board failure ; 3.PFC failure ;	1.Check the system; 2.Change the driver board; 3.Change the PFC.
13	DC voltage detected abnormal .	1.Input voltage is too high or too low;	1.Check the power supply.
14	PFC LOW voltage detected failure.	2.Driver board failure ;	2.Change the driver board;
15	AD offset abnormal detected failure.		
16	Inverter PWM logic set fault.		
17	Inverter PWM initialization failure		
18	PFC_PWM logic set fault.		
19	PFC_PWM initialization fault.		
20	Temperature abnormal.		
21	Shunt resistance unbalance adjustment fault	Driver board failure.	Change the driver board.
22	Communication failure.	1.Communication wire connect not well. 2.Driver board failure. 3.Control board failure.	1.Check the wiring. 2.Change the driver board. 3.Change the control board.
23	Motor parameters setting of failure	Initialization abnormal.	Reset the power supply.
25	EE data abnormal	Driver board EEPROM abnormal	1.Change EEPROM ; 2.Change driver board.
26	DC voltage mutation error	1.Power input changes suddenly 2.Driver board failure	1.Check power supply , to provide stable power supply ; 2. Change driver board.
27	D axis current control error	1.System overload , phase current is too high; 2.Driver board failure	1.Check system if normally. 2.Check stop valve if is open; 3. Change driver board.
28	q axis current control error	1.System overload , phase current is too high ; 2.Driver board failure	1.Check system if normally. 2.Check stop valve if is open; 3. Change driver board.
29	Saturation error of d axis current control integral	1. System overload suddenly; 2. Compressor parameter not suitable; 3. Driver board failure	1.Check system if normally. 2.Check stop valve if is open; 3. Change driver board.
30	Saturation error of q axis current control integral	1. System overload suddenly; 2. Compressor parameter not suitable; 3. Driver board failure	1.Check system if normally. 2.Check stop valve if is open; 3. Change driver board.

14. TROUBLESHOOTING

Sheet 6 Drive Fault code (36K)

Fault code	Fault Description	Possible Reason of Abnormality	How to Deal With
1	Q axis current detection, step out of failure	1. compressor wire connect not well; 2. Bad driver board components; 3. Compressor start load is too large; 4.Compressor demagnetization; 5.Compressor oil shortage, serious wear of crankshaft; ; 6.The compressor insulation fault	1. Check compressor wire; 2. Change driver board ; 3.Turn on the machine after pressure balance again; 4. Change Compressor; 5. Change the Compressor; 6. Change the Compressor.
2	Phase current detection, out of step	1.Compressor voltage default phase; 2.Bad driver board components; 3.The compressor insulation fault	1.Check compressor wire connection; 2.Change the driver board; 3.Change the Compressor.
3	Initialization, phase current imbalance	Bad driver board components.	Change driver board .
4	Speed estimation, step out of failure	1.Bad driver board components; 2.Compressor shaft clamping; 3.The compressor insulation fault.	1.Change driver board ; 2.Change the Compressor ; 3.Change the Compressor .
5	IPM FO output fault	1.System overload or current overload. 2.Driver board fault; 3. Compressor oil shortage,serious wear of crankshaft; 4.The compressor insulation fault.	1.Check the air-conditioner system; 2.Change the driver board; 3.Change the Compressor; 4. Change the Compressor.
6	Communication between driver board and control board fault	1.Communication wire connect not well; 2.Driver board fault; 3.Control board fault;	1.Check compressor wire connect. 2.Change the driver board; 3.Change the control board ;
7	AC voltage,overload voltage	1.Supply voltage input too high or too low; 2.Driver board fault;	1.Check power supply; 2.Change the driver board;
8	DC voltage,overload voltage	1.Supply voltage input too high ; 2.Driver board fault;	1.Check power supply; 2.Change the driver board;
9	AC voltage imbalance	Driver board fault;	Change the driver board;
10	The PFC current detection circuit fault before compressor is ON	Bad driver board components;	Change the driver board
11	AC voltage supply in outrange	1.Power supply abnormal, power frequency out of range; 2.Driver board fault;	1.Check the system; 2.Change the driver board;
12	Products of single-phase PFC over-current, FO output low level	1.System overload, current too large; 2.Driver board fault; 3.PFC fault.	1.Check the system; 2.Change the driver board; 3.Change PFC.
	Inverter over current (3-phase power supply air conditioners)	1.System overload, current too large; 2.Driver board fault; 3.Compressor oil shortage, serious wear of crankshaft; 4.The compressor insulation fault.	1.Check the system; 2.Change the driver board; 3.Change the Compressor; 4.Change the Compressor.
13	Inverter over current	1.System overload, current too large; 2.Driver board fault; 3.Compressor oil shortage,serious wear of crankshaft; 4.The compressor insulation fault.	1.Check the system; 2.Change the driver board; 3.Change the Compressor; 4.Change the Compressor.
14	PFC over current(single-phase air-conditioner)	1.System overload, current too large; 2.Driver board fault; 3.PFC fault.	1.Check the system; 2.Change the driver board; 3.Change PFC.
	Phase imbalance or phase lacks or the instantaneous power failure (only for 3-phase power supply air conditioners)	1.3-Phase voltage imbalance; 2.The 3-phase power supply phase lost; 3.Power supply wiring wrong; 4.Driver board fault.	1,Check the power supply; 2.Check the power supply; 3.Check the power supply wiring connect; 4.Change the driver board.
15	The instantaneous power failure detection	1.The power supply is not stable ; 2.The instantaneous power failure ; 3.Driver board fault;	1.Check the power supply. 2.Not fault. 3.Change the driver board;

14. TROUBLESHOOTING

Fault code	Fault Description	Possible Reason of Abnormality	How to Deal With
16	Low DC voltage 200V	1.Voltage input too low ; 2.Driver board fault.	1.Check the power supply. 2.Change the driver board.
18	Driver board read EE data error	1.EEPROM has no data or data error; 2.EEPROM circuit fault.	1,Change EEPROM component; 2,Change the driver board.
19	PFC chip receive data fault	Abnormal communication loop	Change the drive board.
20	PFC soft start abnormal	Abnormal PFC drive loop	Change the drive board.
21	The compressor drive chip could not receive data from PFC chip.	Communication loop fault.	Change the drive board.

15. CHECKING COMPONENTS

15. Checking components

15.1 Check refrigerant system

TEST SYSTEM FLOW

Conditions: ① Compressor is running.

② The air condition should be installed in good ventilation.

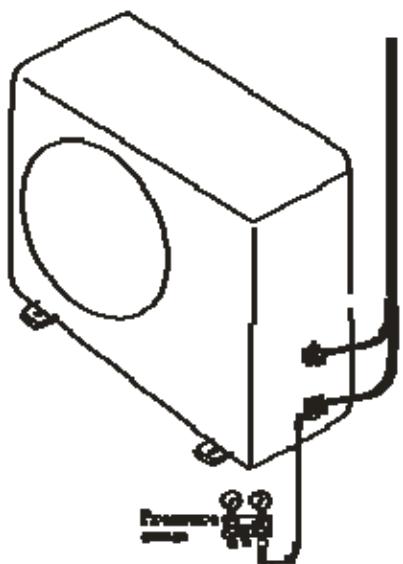

Tool: Pressure Gauge

Technique: ① see ② feel ③ test

SEE ----- Tube defrost.

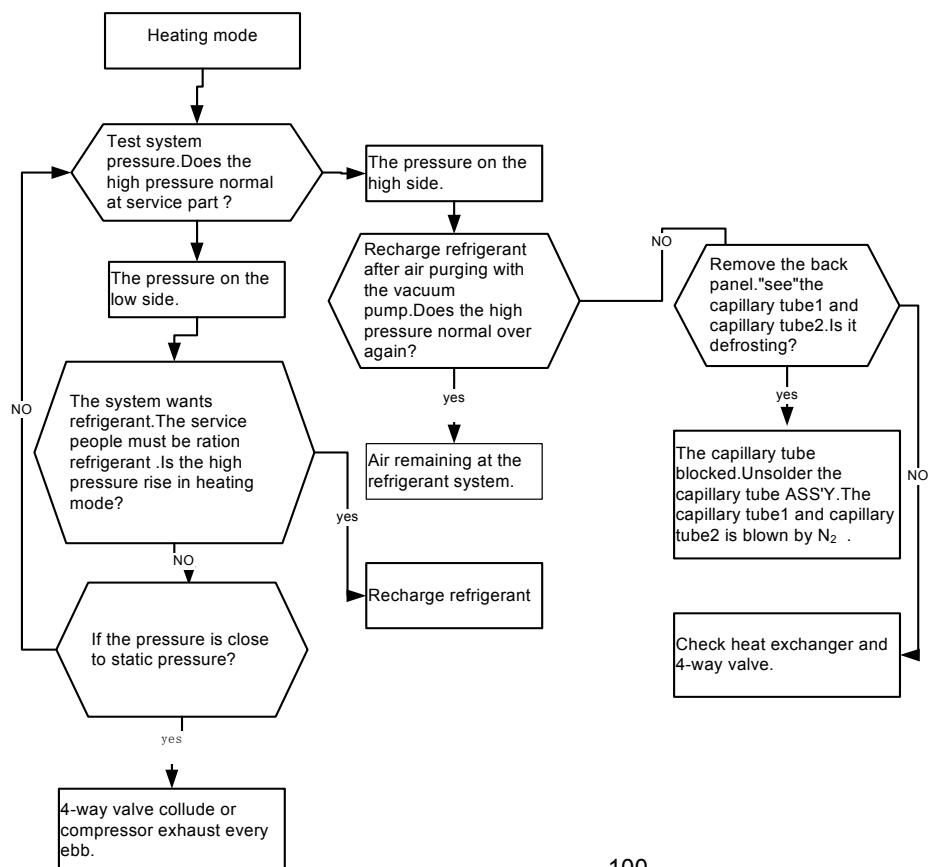

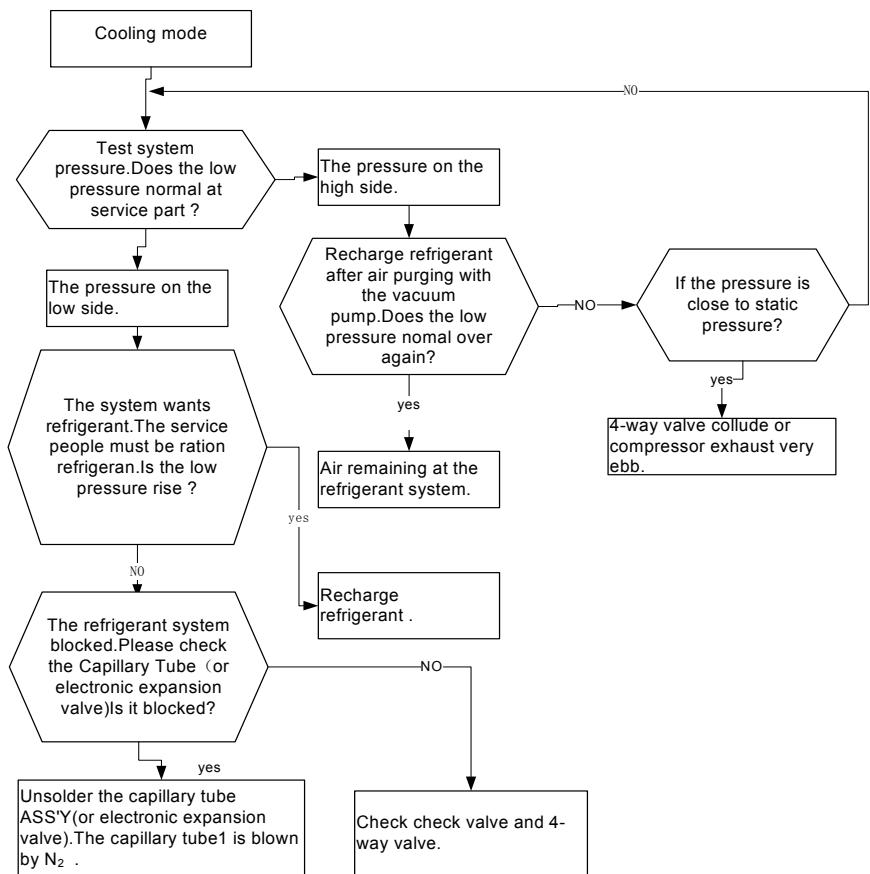

FEEL ----- The difference between tube's temperature.

TEST ----- Test pressure.

15. CHECKING COMPONENTS

Test system flow

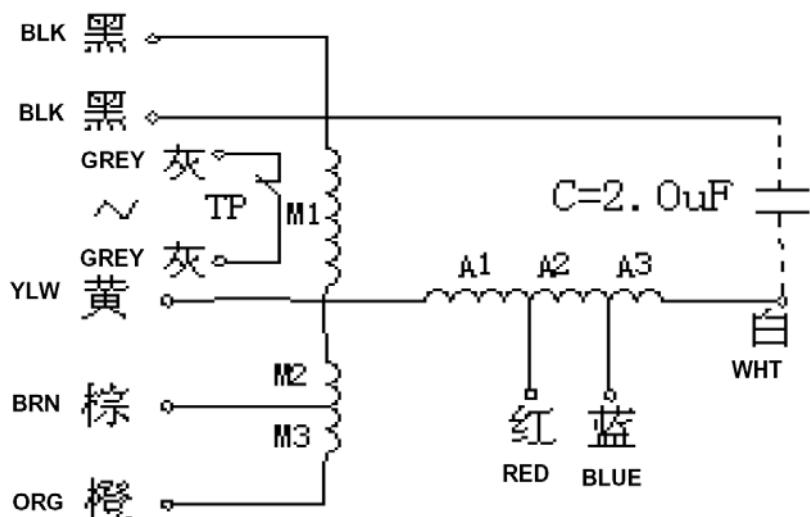

15. CHECKING COMPONENTS

15.2 Check parts unit

1. INDOOR FAN MOTOR

Duct type

18K Motor model: YSK110-40-4-A

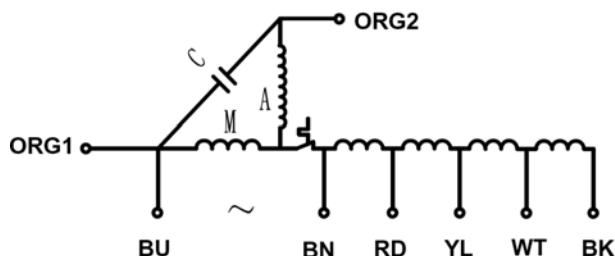

BLACK-YELLOW: $146 \pm 15\% \Omega$

YELLOW-BROWN: $33 \pm 15\% \Omega$

BROWN-ORANGE: $43 \pm 15\% \Omega$

YELLOW-RED: $63 \pm 15\% \Omega$

24K/36K

24K Motor model: Y6S419C56

Main winding resistance: Black-Red $209.4 \Omega \pm 15\%$;

Auxiliary winding resistance:

Red-Yellow $36.2 \Omega \pm 15\%$;

Yellow-White $51.5 \Omega \pm 15\%$;

White-Blue $109.2 \Omega \pm 15\%$;

15. CHECKING COMPONENTS

36K Motor model: Y7S423B814

Main winding resistance: Blue-Brown $52.5 \Omega \pm 12\%$;

Auxiliary winding resistance:

Brown-Red $3.78 \Omega \pm 15\%$;

Red-Yellow $3.68 \Omega \pm 15\%$;

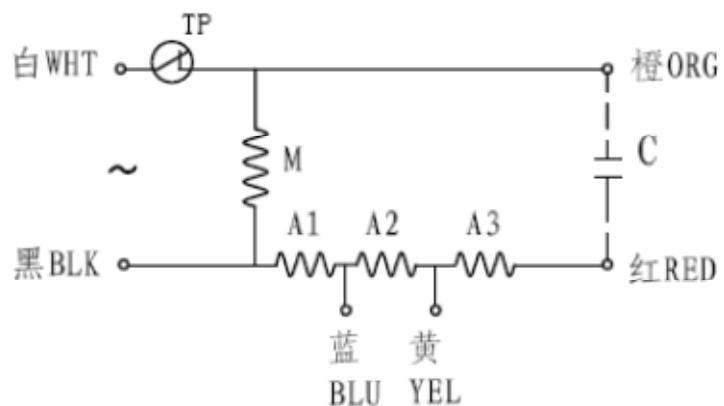

Yellow-White $0.89 \Omega \pm 15\%$;

White-Black $4.67 \Omega \pm 15\%$;

Orange-Brown $29.5 \pm 12\%$

Cassette

18K-AC MOTOR MODEL:YDK95-28-4-B

25°C

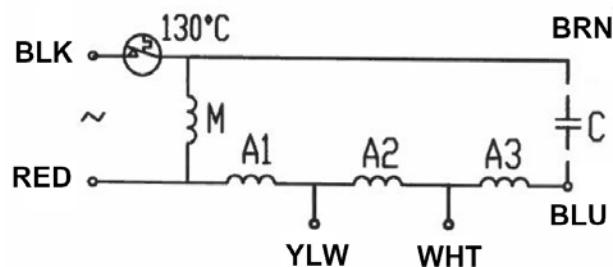

M $240 [\Omega]$ $\pm 15\%$

A1 $60 [\Omega]$ $\pm 15\%$; A2 $33 [\Omega]$ $\pm 15\%$;

A3 $143 [\Omega]$ $\pm 15\%$;

15. CHECKING COMPONENTS

24K

Main winding resistance: Black-Red $209.4 \Omega \pm 15\%$;

Auxiliary winding resistance:

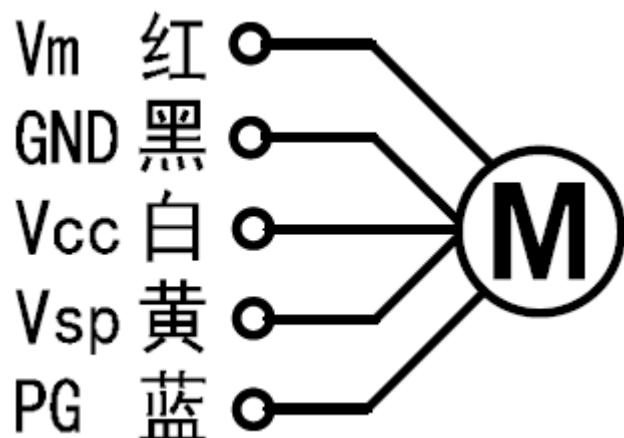

Red-Yellow $36.2 \Omega \pm 15\%$;

Yellow-White $51.5 \Omega \pm 15\%$;

White-Blue $109.2 \Omega \pm 15\%$;

36K-DC motor

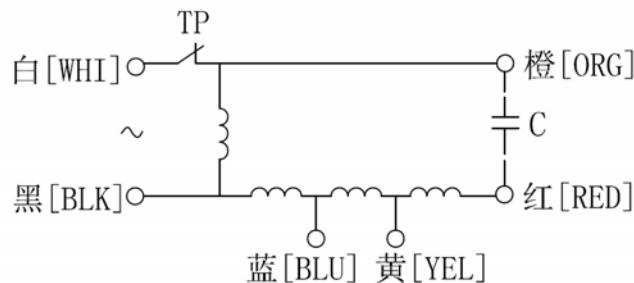

MODEL:EHDS50AQH

15. CHECKING COMPONENTS

Ceiling & Floor

18K/24K

18K Motor model: YSK110-22-4-A

Main winding resistance: White-Black $187 \Omega \pm 15\%$;

Auxiliary winding resistance:

Black-Red $210 \Omega \pm 15\%$;

Black-Blue $37.5 \Omega \pm 15\%$;

Blue-Yellow $27.8 \Omega \pm 15\%$;

Yellow-Red $146 \Omega \pm 15\%$;

24K Motor model: YSK110-100-4-A

Main winding resistance: White-Black $55 \Omega \pm 15\%$;

Auxiliary winding resistance:

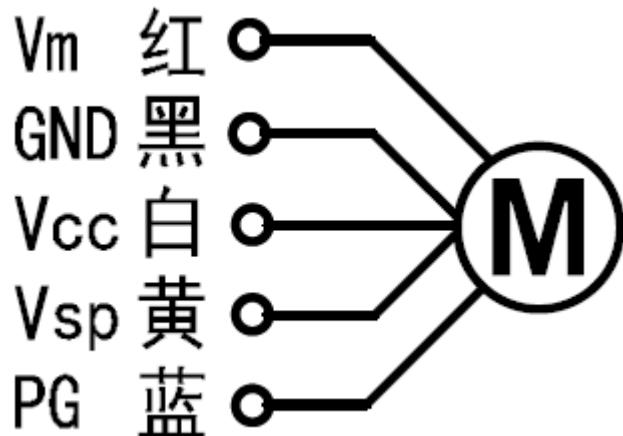

Black-Red $52.5 \Omega \pm 15\%$;

Black-Blue $23.2 \Omega \pm 15\%$;

Blue-Yellow $10.9 \Omega \pm 15\%$;

Yellow-Red $18.3 \Omega \pm 15\%$;

36K Motor model: SIC-70CW-F1140-3

15. CHECKING COMPONENTS

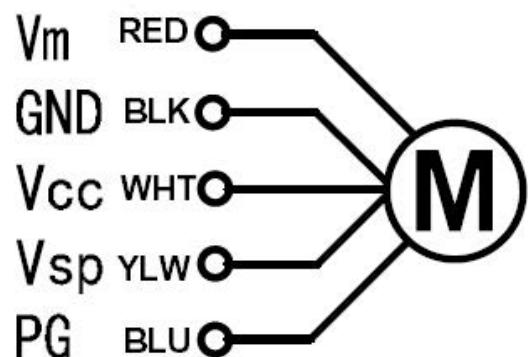

2. OUTDOOR FAN MOTOR

DC MOTOR

18K-- MOTOR MODEL: SIC-52FV-F130-3

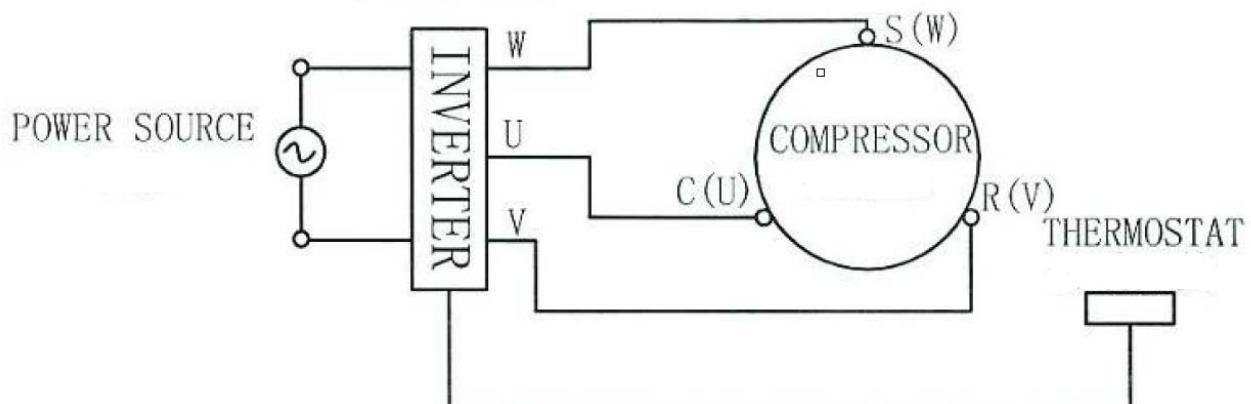

24K-- MOTOR MODEL: SIC-61FV-F161-1

36K—MOTOR MODEL:SIC-71FW-D8121-1

3. COMPRESSOR

COMPRESSOR EXAMINE AND REPAIR

18K:ATN150D42UFZ

24K:ATF235D43UMT

36K:ATL253UDPC9AUL

15. CHECKING COMPONENTS

Test in resistance.

TOOL: Multimeter.

Test the resistance of the winding. The compressor is fault if the resistance of winding 0(short circuit) or (open circuit)

Familiar error:

- 1) Compressor motor lock.
- 2) Discharge pressure value approaches static pressure value .
- 3) Compressor motor winding abnormality.

Notes:

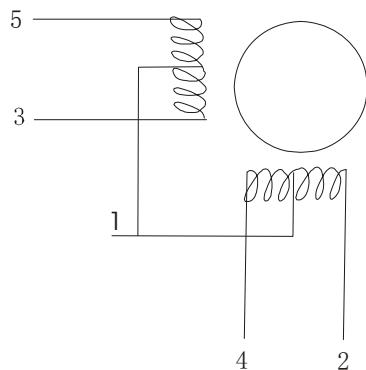

- 1) Don't put a compressor on its side or turn over.
- 2) Please assembly the compressor in your air conditioner rapidly after removing the plugs. Don't place the comp. In air for along time.
- 3) Avoiding compressor running in reverse caused by connecting electrical wire incorrectly.
- 4) Warning! In case AC voltage is impressed to compressor, the compressor performance will below because of its rotor magnetic force decreasing.

4. INDUCTANCE

Familiar error:

- 1) Sound abnormality
- 2) Insulation resistance disqualification.

5. STEP MOTOR

15. CHECKING COMPONENTS

Test in resistance.

TOOL: Multimeter.

Test the resistance of winding. The stepper motor is fault if the resistance of winding 0(short circuit) or (open circuit) .

6. FUSE

Checking continuity of fuse on PCB ASS'Y.

Remove the PCB ASS'Y from the electrical component box. Then pull out the fuse from the PCB ASS'Y (Fig.1)

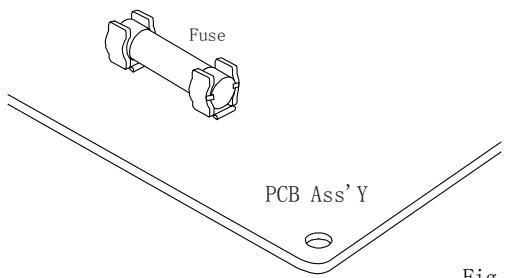

Fig. 1

Check for continuity by a multimeter as shown in Fig.2.

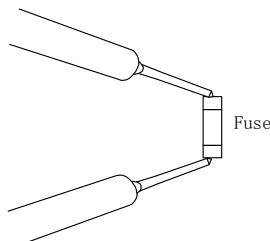

Fig. 2

7. CAPACITOR

Remove the lead wires from the capacitor terminals, and then place a probe on the capacitor terminals as shown in Fig.3.

Observe the deflection of the pointer, setting the resistance measuring range of the multimeter to the maximum value.

- * The capacitor is “good” if the pointer bounces to a great extent and then gradually returns to its original position.
- * The range of deflection and deflection time differ according to the capacity of the capacitor.

15. CHECKING COMPONENTS

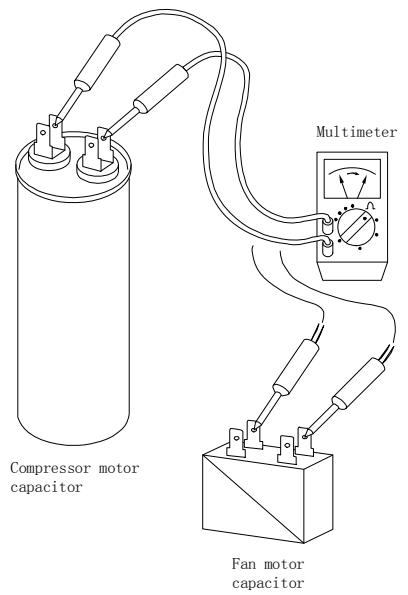

Fig. 3

Hisense

Product improvement, specifications and appearance in this manual are subject to change without prior notice.
